Sadržaj masnoće je 4,3% po masi. Boja proizvoda je svetlo crvena. Proizvod ima izgled mladog sira. U proizvodu se mogu videti delići voćnog preparata. Proizvod je pripremljen u posudama od 150g.	**0406 10 20**
32007R0904, 904/2007 of 27.7.2007, (OJ L 196, 28.7.2007, p.37). http	59/2008, 11.6.2008. https://	"Pasta filata" type cheese in block form made by adding rennin and thermophilic bacteria (e.g. Streptococcus thermophilus) to milk.The whey is separated after curdling.The curd is then heated to about 80°C. The curd is kneaded and stretched to give it a stringy texture.The product is then divided into the requisite sizes(1 to kg) and salted. The cheese is wrapped in ripening film and stored after its manufacture for one to two weeks at a low temperature (2 to 4°C). The composition of the cheese is (% by weight): Dry matter 54,2 ; Total fat 23,3 ; Fat content in the dry matter 43,0 ; Water content in the fat-freematter 59,7 . The cheese has a mild, buttery,s lightly salty flavour. It is used, interalia,as cheese for pizzas	Sir vrste „Pasta filata" u obliku bloka napravljen dodavanjem renina i termofilnih bakterija (npr., Strptococcus thermophilus) mleku. Surutka se odvaja posle zgrušavanja. Gruda (zgruš) se zatim zagreva do otprilike 80ºC. Gruda (zgruš) se mesi i razvlači da bi se dobila vlaknasta tekstura. Proizvod se zatim deli na potrebne veličine (1 do 3 kg) i soli. Sir se umotava u film za zrenje i skladišti posle proizvodnje jednu do dve nedelje na niskoj temperaturi (2 do 4ºC). Sastav sira je (% po masi): suva materija 54,2; ukupna masnoća 23,3; sadržaj masnoće u suvoj materiji 43,0; sadržaj vode u nemasnoj materiji 59,7. Sir ima blag, puterast, blago slan ukus. Koristi se, između ostalog, kao sir za picu.	**0406 10 20**

The product is floating in brine, has a gel-like consistency and has an appearance similar to glass noodles. It is put up for retail sale in packs containing 250 g (160 g drained net weight). The product is produced by mixing konjak tuber (Amorphophallus konjac) flour with water containing calcium hydroxide (proportions of the mixture in % by weight: konjak tuber flour 3-7, water 93-97). The mixture is then boiled and the resultant gel is pressed through a mould to give the product its final shape.	Proizvod koji se sastoji od blago želatinskih i lepljivih, prozirnih, belih, komadića, dužine približno 1 cm i prečnika približno 3 mm. Proizvod pliva u salamuri, ima konzistenciju želatina i izgleda kao stakleni rezanci. Pripremljen je za prodaju na malo u pakovanjima koja sadrže 250 g (160 g oceđene neto mase). Proizvod se dobija mešanjem brašna gomolja biljke konjak (Amorphophallus konjac), sa vodom koja sadrži kalcijum hidroksid (udeo komponenti u mešavini u % po masi: brašno gomolja biljke konjak 3-7%, voda 93-97%). Mešavina je zatim prokuvana, a dobijeni želatin istisnut kroz kalup, kako bi proizvod dobio konačni oblik.	**1901 90 91**

The product has a magnesium content, calculated as magnesium oxide, of approx. 28 % by weight, and an aluminium content, calculated as aluminium oxide, of approx. 72 % by weight.The product is used in the manufacture of refractory bricks and tiles used in the steel industry.The product is obtained from a chemical reaction between magnesium oxide and aluminium oxide by fusion in a rotary furnace.	Proizvod stehiometrijskog sastava sadrži magnezijum aluminat (magnezijum aluminijum oksid) sa kristalnom strukturom spinela, hemijski je definisani proizvod, u obliku nepravilnih granula, grudvica ili praha. Proizvod ima sadržaj magnezijuma, računat kao magnezijum oksid, približno 28% po masi i sadržaj aluminijuma, računat kao aluminijum oksid, približno 72% po masi. Proizvod se koristi u proizvodnji vatrostalnih cigala i crepova koji se koriste u industriji čelika. Proizvod se dobija hemijskom reakcijom između magnezijum oksida i aluminijum oksida topljenjem u rotacionoj peći.	**2841 90 85**
32017R1267, 2017/1267 of 11.7.2017, (OJ L 183, 14.7.2017, p. 3–5). http	87/2017, 27.9.2017. https://	A product in the form of a fine, white, odourless powder consisting of microspheres (particle size < 10 µm) with a density of approximately 2,1-2,5 g/cm3. | The microspheres consist of nepheline or nepheline syenite that has been heated to make the material more ellipse-shaped and to round off the rough edges. As a result of this process, the nepheline or nepheline syenite forms a glassy surface. Nepheline and nepheline syenite are sodium potassium aluminosilicates. | The product is used as an additive for paints, coatings and films in order to reduce volatile organic compound levels, increase filler loadings, improve hardness, and add burnish, scrub and abrasion resistance.	Proizvod u obliku sitnog, belog, praha bez mirisa, sastoji se od mikrosfera (veličina čestice < 10 µm) gustine približno 2,1-2,5 g/cm3. Mikrosfere se sastoje od nefelina ili nefelin sijenita koji je bio zagrevan kako bi se materijal doveo više u oblik elipse i kako bi se zaoblile oštre ivice. Kao posledica tog postupka, nefelin ili nefelin sijenit obrazuje staklastu površinu. Nefelin i nefelin sijenit su natrijum kalijum aluminosilikati. Proizvod se koristi kao aditiv za boje, premaze i filmove u cilju da smanji stepen isparenja organskih jedinjenja, poveća količinu punilaca, poboljša tvrdoću, i doda otpornost na glačanje, trljanje i abraziju.	**2842 10 00**

32017R1268, 2017/1268 of 11.7.2017, (OJ L 183, 14.7.2017, p. 6–8). http	87/2017, 27.9.2017. https://	A product in the form of fine white wax beads of approximatively 1 mm in diameter, obtained from refined palm oil. | The product consists of: | – | hydrogenated hard palm stearin, | – | non-hydrogenated hard palm stearin, | – | an optical brightener (approx. 0,01 % by weight). | Palm stearin obtained from palm oil is subjected to a multi-stage fractionation and the hard stearin (solid fraction) is separated from the soft stearin. Then, a part of the hard stearin is subjected to a hydrogenation process, and mixed with the non-hydrogenated part of the hard stearin and with an optical brightener. Subsequently, the obtained product is subjected to a beading process. | The product is of waxy character and is used as raw material for manufacturing candles. | The dropping point is 59,2 °C ± 0,5 °C and the viscosity measured with a rotational viscometer does not exceed 10 Pa.s at a temperature of 10 °C above the dropping point. | The product is packed in 25 kg bags.	Proizvod u obliku sitnih belih perlica od voska, prečnika približno 1 mm, dobijen od rafinisanog palminog ulja. Proizvod se sastoji od: – hidrogenizovanog čvrstog palminog stearina, – nehidrogenizovanog čvrstog palminog stearina, – optičkog izbeljivača (približno 0,01 % po masi). Palmin stearin dobijen od palminog ulja podvrgava se višestepenom frakcionisanju, a čvrsti stearin (čvrsta frakcija) izdvaja se od mekog stearina. Potom, deo čvrstog stearina podvrgava se postupku hidrogenizacije i meša sa nehidrogenizovanim delom čvrstog stearina i optičkim izbeljivačem. Potom, od dobijenog proizvoda izrađuju se perlice. Proizvod ima voskaste osobine i koristi se kao sirovina za proizvodnju sveća. Tačka kapanja je 59,2 °C ± 0,5 °C, a viskozitet meren rotacionim viskoziometrom ne prelazi 10 Pa.s na temperaturi od 10 °C iznad tačke kapanja. Proizvod se pakuje u vreće od 25 kg.	**3404 90 00**

The board is manufactured by extrusion. It has a rectangular profile shape and a density of 1,20 g/cm3. The upper surface is grained and textured while the lower surface is ribbed. The board has grooves running the whole length along its side. It has the characteristics of a rigid inflexible plastics product, with wood waste forming the filler. It is a wood substitute and is used for making, for example, decks and walkways.	Daske za popločavanje izrađene od kompozitnog drveta, dimenzija približno 0,15 x 0,02 x 3,7 m i sastavljene od otpadnih drvenih vlakana (60%), reciklirane plastične mase (HDPE) (30%), neplastičnih aditiva, punilaca, UV stabilizatora i pigmenata (10%). Daska se proizvodi ekstrudiranjem. Ima pravougaoni poprečni presek i gustinu od 1,20 g/cm3. Gornja površina je brušena i teksturirana, dok je donja površina rebrasta. Daska ima žljebove celom dužinom bočne strane. Ima karakteristike krutog, nesavitljivog proizvoda od plastične mase, čiji je punilac izrađen od drvenog otpada. Proizvod je zamena za drvo i upotrebljava se za izradu, na primer, pločnika i staza.	**3918 90 00**

32017R1983, 2017/1983 of 27.10.2017, (OJ L 287, 4.11.2017, p. 1–3). http	8/2018, 31.1.2018. https://	An article in a form of an unworked board with a width of approximately 125 cm, a thickness of approximately 7,5 cm and a length of approximately 2 000 cm. It is made by gluing together veneer layers of spruce, pine or mixtures of both types of wood layers. | The veneer layers are positioned in such a way that the direction of the wood fibres is the same in all layers. Some layers may also be positioned perpendicularly. The individual layers are bonded together by a phenol-formaldehyde adhesive during a pressing operation at high temperature. Edges and ends of the surface are coated with wax. | The veneer layers of wood used to manufacture the article have an initial thickness of 2,8 to 3,2 mm and a density of 445 kg/m3 (spruce veneer) and 500 kg/m3 (pine veneer). Following the pressing process (with a pressure of 2,8 N/mm2), the individual pressed layers in the final product have a thickness of approximately 2,75 mm and the density of the final product is typically between 540 kg/m3 (spruce veneer) and 620 kg/m3 (pine veneer). | See image (*1).	Proizvod u obliku neobrađene ploče širine približno 125 cm, debljine približno 7,5 cm i dužine približno 2000 cm. Izrađen je lepljenjem slojeva funira smreke, bora ili pomešanih slojeva obe vrste drveta./ / Listovi za funiranje postavljeni su na način da je pravac drvenih vlakana isti u svim slojevima. Neki slojevi mogu takođe biti postavljeni perpendikularno. Pojedinačni slojevi spojeni su međusobno fenol-formaldehidnim lepkom u toku operacije presovanja na visokoj temperaturi. Ivice i krajevi površine prevučeni su voskom. / / Slojevi furnira od drveta koji se koriste se za izradu proizvoda, imaju početnu debljina od 2,8 do 3,2 mm i gustinu od 445 kg/m3 (furnir smreke) i 500 kg/m3 (furnir bora). Nakon postupka presovanja (pritisak od 2,8 N/mm2), pojedinačni slojevi u gotovom proizvodu imaju debljinu približno 2,75 mm, a gustina gotovog proizovda je obično između 540 kg/m3 (furnir smreke) i 620 kg/m3 (furnir bora)./ / Videti sliku (*1)./	**4412 99 85**
32012R1128, 1128/2012 of 26.11.2012, (OJ L 331, 1.12.2012, p. 15-16). http	9/2013, 29.1.2013. https://	A panel (so-called "waterproof plywood") made of thirteen sheets of wood glued together with a glue resistant to boiling water. The sheets are disposed so that the grains of successive layers are at an angle. The inner sheets are less than 2 mm thick. The two outer sheets are less than 1 mm thick and are made of poplar covered with a polymer coating for insulation. The panel's density is of 0,5 g/cm3. The panel is used in construction, for example, for concrete shuttering.	Ploča (takozvana „vodootporna šperploča“) izrađena od trinaest listova od drveta, zalepljenih međusobno lepkom otpornim na ključalu vodu. Listovi su postavljeni tako da se vlakna susednih slojeva nalaze pod uglom u odnosu jedna na drugo. Unutrašnji slojevi su debljine manje od 2 mm. Dva spoljašnja sloja su debljine manje od 1 mm i izrađena su od drveta topole i prevučena polimerom zbog izolacije. Gustina ploče je 0,5g/cm3. Ploča se upotrebljava u građevinarstvu, na primer, kao drvene oplate pri betoniranju.	**4412 32 10**

32013R0384, 384/2013 of 22.4.2013, (OJ L 117, 27.4.2013, p. 7–9). http	60/2013, 10.7.2013. https://	An article having the shape of a cylinder with a diameter of approximately 7 mm and a length of approximately 130 mm, consisting of an outer layer of paper that holds the following components in place: three filters of cellulose acetate fibres with activated carbon (C),four filters of cellulose acetate fibres also containing impregnated fibres (impregnated with an agglutinating substance that does not penetrate into the inner layers of the fibres) (I),two filters of cellulose acetate fibres (A),four components of flavourful oriental tobacco of the kind used in cigarettes (T).As far as the cellulose acetate fibres in the different filters are concerned (C, I, A), the fibres are oriented parallel to each other. The fibres form a flexible, spongy body of even thickness, and are readily separable and "pluckable". Within the cylinder, the components are placed in the following order: C (approximately 6 mm long),I (approximately 10 mm long),T (approximately 10 mm long),A (approximately 13 mm long),T (approximately 10 mm long),I (approximately 10 mm long),C (approximately12 mm long),I (approximately 10 mm long),T (approximately 10 mm long),A (approximately. 13 mm long),T (approximately 10 mm long),I (approximately 10 mm long),C (approximately 6 mm long).The percentage by weight of the different materials in the article is as follows: C: approximately 17 %,I: approximately 16 %,A: approximately 8 %,T: approximately 41 %,paper: approximately 18 %.The article is designed to be cut up and to be used in the production of filter cigarettes. It is not evident from the objective characteristics of the article how it will be cut up. (See photographs nos. 664 A and B) [1]	Proizvod koji ima oblik valjka, prečnika približno 7 mm i dužine približno 130 mm, sastoji se od spoljašnjeg sloja od hartije koji drži na mestu sledeće komponente: tri filtera od celulozno-acetatnih vlakana sa aktivnim ugljenikom (C),/ / četiri filtera od celulozno-acetatnih vlakana koji takođe sadrže impregnisana vlakna (impregnisana lepljivom supstancom koja ne prodire u unutrašnje slojeve vlakana) (I),/ dva filtera od celulozno-acetatnih vlakana (A),/ četiri komponente od aromatizovanog orijentalnog duvana kakav se upotrebljava u cigaretama (T). Što se tiče celulozno-acetatnih vlakana u različitim filterima (C, I, A) , vlakna su usmerena paralelno jedna prema drugim. Vlakna formiraju savitljivo, sunđerasto telo ujednačene debljine, lako su razdvojiva i mogu se čupati. U samom valjku, komponente se smenjuju sledećim redosledom: C (približne dužine 6 mm),/ I (približne dužine 10 mm),/ -/ T (približne dužine 10 mm), -/ A (približne dužine 13 mm), -/ T (približne dužine 10 mm), -/ I (približne dužine 10 mm), -/ C (približne dužine 12 mm), -/ I (približne dužine 10 mm), -/ T (približne dužine 10 mm), -/ A (približne dužine 13 mm), -/ T (približne dužine 10 mm), -/ I (približne dužine 10 mm), -/ C (približne dužine 6 mm). Procenat po masi sledećih materijala u proizvodu je sledeći: -/ C: približno 17%, -/ I: približno 16%, -/ A: približno 8%, -/ T: približno 41%, -/ hartija: približno 18%. Proizvod je napravljen da se seče i upotrebi u proizvodnji filter cigareta. Nije očigledno iz objektivnih karakteristika kako će se proizvod seći. 31998R0272, 272/98 of 2.2.1998, (OJ L 27, 3.2.1998, p.3). http	97/2011, 21.12.2011. https://	Goalkeeper's glove for ice-hockey or street-hockey, composed of the glove and the blocking-pad stitched to it at five points. It is for a right-handed goalkeeper, for the hand holding the stick.The blocking-pad (of dimensions 37 x 20 x 3 cm) forming the back of the glove is made of rigid cellular plastic entirely covered with mainly fabric of man-made fibres. Its main purpose is to stop the ball (or puck, in ice-hockey) when shot at goal, and protects the hand. The other part resembles a normal glove, with the back of knitted fabric and the front made of non-woven polyamide microfibres, so that the goalkeeper can hold and handle the stick (see photographs No 571)	Golmanska rukavica koja se koristi za hokej na ledu ili ulični hokej, sastoji se iz dva dela, rukavice i jastučića blokera koji se sa za nju prišiven u pet tačaka. Obično se nosi na desnoj ruci (ukoliko je golman desnoruk) kojom se takođe drži i palica. Jastuče blokera koji obrazuje nadlanicu rukavice, (dimenzije: 37cm x 20cm x 3cm), izrađeno je od krute plastike ćelijaste strukture, u potpunosti prekrivene pletenim materijalom od veštačkih ili sintetičkih vlakana. Osnovna svrha mu je da zaustavi lopticu (ili pak u hokeju na ledu) kada je upućena ka golu, kao i da zaštiti nadlanicu same ruke. Drugi deo ovog proizvoda liči na običnu rukavicu. Dlan je izrađen od netkanih poliamidnih mikrovlakana i golmanu služi da bi držao i manipulisao palicom. Gornji deo izrađen je od pletenog materijala. (Videti fotografiju br. 571) (*)	**6116 93 00**

31996R1308, 1308/96 of 4.7.1996, (OJ L 167, 6.7.1996, p.19). http	64/2012, 4.7.2012. https://	Two garments packaged for retail sale, consisting of: (a) a lightweight loose-fitting garment made from two differently-coloured fabrics (100 % nylon, coated with plastic visible to the naked eye), intended to cover the upper part of the body and reaching down to above the mid-thigh. It opens completely at the front, with a slide-fastener and a protective cover with press-stud fastening left over right. The garment has a high collar sewn on, a hood with a drawstring which can be stored in a pocket in the collar, long sleeves tightened at the ends, and two pockets with slide-fasteners inserted at the front. It can be tightened by drawstrings at the collar, waist and base, and has velcro-tapes at the collar and sleeve-ends, a partial lining (100 % nylon) in the upper part of the garment, a decoration sewn on the left sleeve and a logo embroidered on the chest (see photograph No 545 A); (b) a loose-fitting garment made from two differently-coloured fabrics (100 % nylon), intended to cover the upper part of the body and reaching down to above the mid-thigh. It opens completely at the front, with a slide-fastener. It has long sleeves with knitted ribbing at the ends, a collar of velour fabric sewn on, and two pockets with slide-fasteners inserted at the front. It has a logo embroidered at the front, a tightening facility with drawstring at the waist, and quilted lining with an inside-pocket (see photograph No 545 B). The two garments may be used separately, and can be combined by means of velcro-tapes at the collar, press-studs inside the sleeve-ends, and slide-fastener at the opening at the front	Dva odevna predmeta spakovana za prodaju na malo, sastoje se od: (a) laganog komotnog komada odeće izrađenog od šarenog materijala (100% najlon, prevučen plastikom vidljivom golim okom), namenjenog za pokrivanje gornjeg dela tela i doseže do iznad polovine butina. Ceo se otvara na prednjici, sa patent zatvaračem i zaštitnim preklopom sa kopčanjem drikerima leve prednjice preko desne. Komad odeće ima našiven okovratnik, kapuljaču sa uzicom za zatezanje koja se može staviti u džep na okovratniku, duge rukave stegnute na krajevima i dva paspul džepa sa patent zatvaračima. Može se stegnuti pomoću uzica za zatezanje na okovratniku, pojasu i donjoj ivice, a ima i čičak trake na okovratniku i krajevima rukava, delimično je postavljen (100% najlon) u gornjem delu, ima našiven ukras na levom rukavu i izvezen logo na grudima (videti fotografiju No 545 A); (b) komotnog komada odeće izrađenog od dva materijala različitih boja (100% najlon), namenjenog za pokrivanje gornjeg dela tela, a koji doseže do iznad polovine butina. Ceo se otvara na prednjici sa patent zatvaračem. Ima duge rukave sa pletenom prugastom ranflom na krajevima, okovratnik na koji je našiven velur, i dva paspul džepa sa patent zatvaračima na prednjici. Ima izvezen logo na prednjici, mogućnost stezanja pomoću uzice za zatezanje na pojasu, i punjenu postavu sa unutrašnjim džepovima (videti fotografiju No 545 B). Dva odevna predmeta mogu se koristiti odvojeno, a mogu se i kombinovati pomoću čičak traka na okovratniku, drikera sa unutrašnje strane krajeva rukava i patent zatvarača na otvoru na prednjici.	**6210 40 00/ 6202 93 00**

32012R0298, 298/2012 of 2.4.2012, (OJ L 99, 5.4.2012, p. 12-14). http	46/2012, 4.5.2012. https://	Made-up article in the form of a sleeveless garment, intended to cover the upper part of the body, reaching down to below the hips. The article is made up of three panels, assembled by sewing. Each panel is made of three layers, two outer layers of woven textile fabric of man-made fibres (nylon) and an inner layer, that serves as protection against radiation, made from a mixture of antimony powder, tungsten powder and a polymer. The three layers are stitched together along all the edges with an applied ribbon. The two front panels overlap each other entirely, left over right. The two front panels are fastened together by two broad long vertical "Velcro"-type strips down the front and two shorter "Velcro"-type strips at the shoulders. The front fastening is assisted on the right side by three snap-fit closings. The article has a round neckline, a breast pocket on the left side and padded shoulders. (protective industrial and occupational clothing) (See photographs Nos 659 A and B) [1]	Gotov proizvod u obliku komada odeće bez rukava, namenjen da pokrije gornji deo tela dopirući do ispod kukova. Proizvod je izrađen od tri komada, spojenih šivenjem. Svaki komad je izrađen od tri sloja, dva spoljna sloja od tkanog tekstilnog materijala od sintetičkih vlakana (najlona), i unutrašnjeg sloja koji služi kao zaštita protiv zračenja, izrađenog od mešavine antimona u prahu, volframa u prahu i polimera. Tri sloja su spojena prošivanjem trake duž svih ivica. Dva prednja dela se preklapaju u potpunosti, s leve na desnu stranu. Dva prednja dela se jedan za drugi pričvršćuju sa dve široke, dugačke, vertikalne trake velkro tipa (čičak traka) duž prednje strane i sa dve kraće velkro trake na ramenima. Pričvršćivanju prednjih delova doprinose i tri driker zatvarača, sa desne strane. Proizvod ima okrugli izrez oko vrata, džep na grudima sa leve strane i punjene naramenice. 32024R1992, 2024/1992 of 16.7.2024, (OJ L, 2024/1992, 18.7.2024). http	15/2025, 21.2.2025. https://	2. Tight fitting garment covering the upper part of the body, made of two different kinds of knitted textile fabric of man-made fibres: the front of the garment is made of a pile fabric (sort of terry fabric; 83% polyester, 17% elastane) and the back of the garment is made of mesh fabric (100% nylon)./ The garment has a round neckline. It is slee-veless and has a full front opening that is closed with a zip. In addition, at the lower half of the opening there is a hook-and-eye closing system underneath the zip. At the lower third of the front panels there is a dou-ble layer of textile fabric (the second layer of textile fabric is sewn on to the inside). On each side of the garment at the bottom of the front panels an elastic band (of a width of approximately 10 cm and a length of approximately 10 cm) is sewn on. These two elastic bands serve to tighten the lower part of the garment and can be fixed and adjusted to the front panels by means of a Velcro type attachment./ On the back of the garment there are three patches for Velcro type fixation attached (each patch is approximately 5 cm wide and 9 cm long). Two of those patches are situated above the shoulder blades and the third patch is situated slightly lower in the middle of the back, where the vertebral col-umn is. Those patches allow for the attach-ment of two elastic bands on the outside of the garment. The two elastic bands (of 100% polyester; approximately 8 cm wide and 45 cm long) are presented together with the gar-ment and can be attached to the patches above the shoulders and the patch in the middle. They are intended to extend from the shoulders diagonally down the back to the side of the garment at the height of the waist, where they can be adjusted (attached as tight as needed to the front material)./ On the inside of the garment each of two (approximately 5 cm wide and 30 cm long) elastic bands of cellular plastics is sewn with its short side to one of the two shoulder patches. Each of these two elastic bands/ extends over the shoulder down to the breast of each front panel, where each band is sewn with its short side to the inside of the front panel. Those elastic bands are held in place by three textile loops fixed to the inside of each front panel of the garment./ On the back of the garment a band (of cellu-lar	2. Tesno prijanjajući odevni predmet koji pokriva gornji deo tela, izrađen od dve različite vrste pletenog tekstilnog materijala od veštačkih ili sintetičkih vlakana: prednja strana odevnog predmeta izrađena je od materijala sa florom (vrsta zamkastog materijala; 83% poliestar, 17% elastin), a leđna strana odevnog predmeta izrađena je od mrežastog materijala (100% najlon)./ Odevni predmet ima okrugli izrez oko vrata. Nema rukave i ima potpuno otvaranje sa prednje strane, sa zatvaranjem patentnim zatvaračem. Pored toga, na donjoj polovini otvora nalazi se sistem kopčanja kukica-okce ispod patentnog zatvarača. Na donjoj trećini prednjih delova nalazi se dvoslojni tekstilni materijal (drugi sloj tekstilnog materijala je prišiven sa unutrašnje strane). Na svakoj strani odevnog predmeta, u donjem delu prednjih delova prišivena je elastična traka (širine približno 10 cm i dužine približno 10 cm). Ove dve elastične trake služe za zatezanje donjeg dela odevnog predmeta i mogu se pričvrstiti i podesiti na prednjim delovima trakama tipa „Velcro” (čičak traka)./ Na leđnoj strani odevnog predmeta nalaze se tri našivka za pričvršćivanje trake tipa „Velcro” (čičak traka) (svaki približno 5 cm širine i 9 cm dužine). Dva takva našivka nalaze se iznad lopatica, a treći nešto niže na sredini leđa, u predelu kičmenog stuba. Ti našivci omogućavaju pričvršćivanje dve elastične trake na spoljašnjoj strani odevnog predmeta. Dve elastične trake (od poliestra 100%; približno 8 cm širine i 45 cm dužine) isporučuju se zajedno sa odevnim predmetom i mogu se pričvrstiti na našivke iznad ramena i našivak u sredini. Namenjene su da se protežu od ramena dijagonalno niz leđa do bočne strane odevnog predmeta u visini struka, gde se mogu podesiti (pričvrstiti pritezanjem po potrebi za materijal prednjeg dela)./ Na unutrašnjoj strani odevnog predmeta, obe elastične trake (približno 5 cm širine i 30 cm dužine) od celularne plastične mase prišivene su svojom kratkom stranom na jedan od dva našivka na ramenu./ Obe elastične trake pružaju se preko ramena nadole do grudi svakog prednjeg dela, gde je svaka traka prišivena svojom kratkom stranom za unutrašnju stranu prednjeg dela. Te elastične trake su učvršćene sa tri tekstilne omče, koje su pričvršćene za unutrašnju stranu svakog prednjeg dela odevnog predmeta./ Na zadnjoj strani odevnog predmeta je traka (od celularne plastične mase,	**6212 90 00**

Tight fitting garment covering the upper part of the body, made of three different kinds of knitted textile fabric of man-made fibres. It consists of a main fabric and several panels attached to the main fabric:/ – the main fabric (85% polyester and 15% elastane) (single jersey plain knit fabric), and/ – the firm panels (100% polyester) (inter-lock knit fabric), and/ – the mesh panels (92% polyester and 8% elastane) (warp knit fabric)./ The garment has a round neckline, short close-fitting sleeves and on the back it is hemmed along the bottom incorporating a relatively firm elastic band of a width of approximately 2,5 cm. The front of the gar-ment has two horizontal firm panels that are attached to the main fabric in the lower quar-ter of the garment. The widths of these panels correspond with the length of the hook-and-eye closing system./ The back is made of a firm panel extending vertically along the spine and branching left and right over the shoulders, flanked by ver-tical mesh panels and the main fabric./ The garment has a full front opening that is closed with a zip and in addition at the lower quarter of the opening there is a hook-and-eye closing system underneath the zip./ The design of the garment contributes to straightening the back by supporting an upright posture of the wearer./ (See images under 1) (*)	1. Tesno prijanjajući odevni predmet koji pokriva gornji deo, izrađen od tri različite vrste pletenog tekstilnog materijala od veštačkih ili sintetičkih vlakana. Sastoji se od osnovnog tekstilnog materijala i nekoliko delova spojenih sa osnovnim tekstilnim materijalom:/ – osnovni tekstilni materijal (85% poliestar i 15% elastin) (jednostavni žersej – tekstilni materijal pleten glatkim prepletajem), i/ – kruti delovi (100% poliestar) (tekstilni materijal pleten interlok prepletajem), i/ – mrežasti delovi (92% poliestar i 8% elastin) (tekstilni materijal pleten po osnovi)./ Odevni predmet ima okrugli izrez oko vrata, kratke uske rukave i na leđima je porubljen duž donjeg dela sa relativno krutom elastičnom trakom širine približno 2,5 cm. Prednja strana odevnog predmeta ima dva horizontalna kruta dela koji su spojeni sa osnovnim tekstilnim materijalom u donjoj četvrtini odevnog predmeta. Širina tih delova odgovara dužini sistema kopčanja kukica-okce./ Leđna strana je izrađena od krutog dela koji se proteže vertikalno duž kičme i grana se levo i desno preko ramena, oivičen vertikalnim mrežastim delovima i osnovnim tekstilnim materijalom./ Odevni predmet ima potpuno otvaranje sa prednje strane, sa zatvaranjem patentnim zatvaračem, a pored toga na donjoj četvrtini otvora nalazi se sistem kopčanja kukica-okce ispod patentnog zatvarača./ Odevni predmet je oblikovan da doprinosi ispravljanju leđa, tako što podupire uspravno držanje korisnika./ (Videti slike pod 1.) 32008R0155, 155/2008 of 21.2.2008, (OJ L 48, 22.02.2008, p.12). http	59/2008, 11.6.2008. https://	Article consisting of two preformed soft cellular plastic cups covered on both surfaces with knitted fabric. Knitted bands are sewn on to the edges of the cups to reinforce their oval shape. The cups are joined together with a magnetic metal clasp. The inside of each cup is coated with an adhesive which is protected by a plastic film. Following removal of the plastic film, the adhesive enables the cups to adhere to the breasts when in direct contact with the skin. The article is designed to be worn next to the skin. (brassière) (See photographs Nos 643A and 643B)	Proizvod koji se sastoji od dve korpe od prethodno formirane, meke, celularne plastične mase čije su obe površine prekrivene pletenom tkaninom. Pletene trake su prišivene za ivice korpi da bi se pojačao njihov ovalni oblik. Korpe su prikačene magnetnom metalnom kopčom. Unutrašnjost svake korpe je prevučena lepljivom masom koja je zaštićena plastičnom folijom. Po uklanjanju plastične folije lepljiva masa omogućava da korpe prionu za grudi kada su u direktnom kontaktu sa kožom. Proizvod je namenjen da se nosi odmah do kože. (grudnjak)	**6212 10 90**
32007R1178, 1178/2007 of 5.10.2007, (OJ L 264, 10.10.2007, p.3). http	59/2008, 11.6.2008. https://	Article made up of two knitted fabrics of different colour, of man-made fibres. The fabrics are suitable for swimwear. The article is to be worn next to the skin, reaching down to just below the bust, with two preformed cups being thinly padded and wired for support. The article has narrow removable shoulder straps. It is closed on the back by means of a clip. The part of the article reaching around the back presents on the inside adhesive strips clinging to the back of the wearer and holding the article in place together with the shoulder straps and the wired preformed cups. (brassiere designed like a bikini top) (See photograph no. 640 A, 640 B)	Proizvod napravljen od dva pletena materijala različiti boje, od veštačkih ili sintetičkih vlakana. Tkanine su pogodne za kupaći kostim. Proizvod se nosi odmah uz kožu, a dopire neposredno ispod grudi, ima dve prethodno oblikovane korpe koje imaju tanke umetke i ožičane su zbog podupiranja. Proizvod ima uzane naramenice koje se mogu sklanjati. Zakopčava se na leđima pomoću kopče. Deo proizvoda koji ide preko leđa ima sa unutrašnje strane lepljive trake koje prijanjaju uz leđa onog ko ih nosi i drže proizvod na mestu zajedno sa naramenicama i ožičanim korpama sa umecima. 32015R2320, 2015/2320 of 8.12.2015, (OJ L 328, 12.12.2015, p. 62–64). http	8/2016, 1.2.2016. https://	An article consisting of shiny woven transparent fabric (100 % polyester), with a machine embroidered decoration on it, presented on 300 cm long support rolls. | One of the two long edges of the article is trimmed with an interlock stitch having a fabric covered lead cord inserted in the stitching tunnel. The opposite edge has a densely woven selvedge to prevent the fabric from unravelling and the weft ends exceed the fabric in the form of fringes. | The length of the fabric that is cut off the roll corresponds to the width of a future curtain. This fabric is converted into a curtain by simply cutting it at the edge of the densely woven selvedge to the required length of the curtain and by hemming this side and the two sides that had been cut off the roll. The edge trimmed with the interlock stitch constitutes the bottom of the curtain and remains as it was on the roll. | (See images) (1)	Proizvod koji se sastoji od sjajnog tkanog providnog tekstilnog materijala (100% poliestar), sa mašinski vezenim ukrasima na sebi, isporučuje se na potpornim rolnama dužine 300 cm. Jedna od dve duže ivice proizvoda ukrašena je interlokovanim porubnim šavom, sa olovnom žicom prekrivenom tekstilnim materijalom umetnutom u šavni tunel. Naspramna ivica ima gusto tkani rub kako bi se sprečilo paranje tekstilnog materijala i krajeve potke koji prelaze tekstilni materijal u obliku resa. Dužina tekstilnog materijala koji se odseca sa rolne odgovara širini buduće zavese. Tekstilni materijal oblikuje se u zavesu jednostavnim odsecanjem ivice sa gusto tkanim rubom, do željene dužine zavese i porubljivanjem te strane i dve strane koje su dobijene odsecanjem sa rolne. Ivica ukrašena interlokovanim porubnim šavom predstavlja podnožje zavese i ostaje onakva kakva je bila na rolni. (Videti slike) (*)	**6303 92 90**
32012R0297, 297/2012 of 2.4.2012, (OJ L 99, 5.4.2012, p. 10-11). http	46/2012, 4.5.2012. https://	A rectangular article measuring approximately 60 × 300 cm, composed of two different layers (one layer of textile fabric and one layer of paper) glued together and having a total thickness of approximately 0,26 mm. The layer of textile fabric consists of non-woven synthetic (polyester) fibres with a thickness of approximately 0,18 mm and a weight of approximately 48,3 g/m2. The layer of paper has a thickness of approximately 0,08 mm and a weight of approximately 20,9 g/m2. The visible side of the paper layer is slightly patterned and has four textile cords of cotton (in the form of twine) glued vertically along the whole length. On the same side, thin bamboo sticks run horizontally across the full width at approximately 4 cm-intervals. The article can be used for several purposes, for example as a panel curtain, as a room divider, to hide open storage or to replace a door. (panel curtain) (see photograph No 657) [1]	Proizvod pravougaonog oblika, približnih dimenzija 60 x 300 cm, sastavljen od dva različita sloja (jedan sloj od tekstilnog materijala i jedan sloj od hartije) zalepljena zajedno, ukupne debljine približno 0,26 mm. Sloj od tekstilnog materijala sastoji se od netkanih sintetičkih (poliester) vlakana, debljine približno 0,18 mm i mase približno 48,3 g/m3. Sloj od hartije ima debljinu približno 0,08 mm i masu približno 20,9 g/m3. Vidljiva strana sloja od hartije je blago dezenirana i ima četiri tekstilna užeta od pamuka (u obliku kanapa) zalepljena vertikalno celom dužinom. Na istoj strani, tanki prutovi od bambusa, pružaju se horizontalno celom širinom u razmacima od približnio 4 cm. Proizvod se može koristiti za više namena, na primer, kao panel zavesa, za deljenje prostorije, za sakrivanje otvorene ostave ili kao zamena za vrata. The fabric is made of textured yarn of polyesters and aluminium-covered polyester fibres (produced through a vapour metalising process) knitted together. The sponge is fully inserted into the fabric. (cleaning cloth) (See photographs No 656 A and No 656 B) (*)	Сложени производ израђен од сунђера од пластичне масе ћелијасте структуре (полиуретан) (11,5 cm x 8,2 cm x 1,1 cm), и крпе од плетеног полиестарског текстилног материјала који прекрива сунђер.Текстилни материјал је израђен плетењем текстурираног полиестарског предива и полиестарских влакана превучених алуминијумом (добијених поступком гасне метализације), заједно. Сунђер је у потпуности уметнут у текстилни материјал.(Крпа за чишћење)(Видети фотографије бр. 656 A и 656 B) (*)	**6307 10 10**

Celex No: Regulation No/Date: OJ L No/Date	"Sl. gl. RS" br./datum	Discription of goods	Opis robe	CN oznaka
32015R0676, 2015/676 of 23.4.2015, (OJ L 111, 30.4.2015, p. 18–20). http	53/2015, 19.6.2015. https://	An article in the form of a sleeve, approxi- mately 20 cm long, made of knitted textile ma- terial with thin foam padding on the palm sur- face. It includes one slightly curved palmar alu- minium splint of approximately 2 cm width, which can be manually bent, and two flexible dorsal stabilisers made of plastic of approxi- mately 1 cm width. The splint and the stabili- sers go through stitched-on tunnels of a con- trasting material which run the entire length of the article and they can be removed. At both ends of the article there are two 'vel- cro-type' straps of 2 cm width to adjust the article to the hand and to the wrist. In the mid- dle of the article there is a wider textile strap of 5 cm width with a 'velcro-type' fastening which is wrapped around the wrist to achieve the desired limitation of the movement of the wrist. The textile straps together with the bendable aluminium splint make the movement of the wrist more difficult. The flexibility of the wrist depends on the tightness of the straps. The article is presented as a wrist stabiliser. (See photographs A + B) (*)	Proizvod u obliku rukava, dužine približno 20 cm, izrađen od pletenog tekstilnog materijala sa tankim penastim punjenjem u području dlana. Sadrži jednu blago zakrivljenu aluminijumsku šinu za dlan, širine približno 2 cm, koja se može ručno savijati, kao i dva fleksibilna stabilizatora nadlanice izrađena od plastike širine približno 1 cm. Šina i stabilizatori provučeni su kroz prošiveni kanal od kontrastnog materijala koji se proteže celom dužinom proizvoda i mogu se izvući. Na oba kraja proizvoda postoje trake "velkro tipa" (čičak traka) širine 2 cm za prilagođavanje proizvoda ruci i ručnom zglobu. U srednjem delu proizvoda postoji šira tekstilna traka, širine 5 cm, sa pričvršćivanjem "velkro tipa" (čičak traka) koja je obavijena oko ručnog zgloba kako bi se postiglo željeno ograničenje pokreta ručnog zgloba. Tekstilne trake zajedno sa savitljivom aluminijumskom šinom otežavaju pokrete ručnog zgloba. Pokretljivost ručnog zgloba zavisi od zategnutosti trake. Proizvod se isporučuje kao stabilizator ručnog zgloba. (Videti fotografije A+B) (*)	**6307 90 10**

32013R0671, 671/2013 of 9.7.2013, (OJ L 193, 16.7.2013, p. 4–5). http	74/2013, 21.8.2013. https://	An article consisting of flat cloth, measuring approximately 26 cm × 32 cm, composed of various textile materials, in the shape of a bird. The main part of the article is made of a single layer of long-looped pile fabric with a sewn-on crown-shaped wing of woven textile material on one side. On the other side, the long-looped pile fabric is bordered by a sewn-on ribbon of woven textile material. A piece of triangular shaped woven fabric is sewn on to the long-looped pile fabric and represents the beak. The eyes are printed on looped tabs and two pieces of woven textile fabric cut in the form of feet are sewn on to the pile fabric. A textile material decoratively cut represents the tail. Varicoloured numbered tabs, loops and strips of woven textile material are attached to the upper edge of the pile fabric.	Proizvod u obliku ptice, od ravnog komada tekstila, dimenzija približno 26 cm x 32 cm, sastavljen je od različitih tekstilnih materijala. Glavni deo proizvoda je izrađen od jednog sloja bukle materijala na koji je sa jedne strane prišiveno krilo od tkanog tekstilnog materijala u obliku krune. Sa druge strane, bukle materijal obrubljen je našivenom trakom od tkanog tekstilnog materijala. Komad tkanog tekstilnog materijala u obliku trougla je našiven na bukle materijal i predstavlja kljun. Oči su štampane na frotirskim trakicama, a dva komada tkanog tekstilnog materijala, iskrojena u obliku nogu, su ušivena za bukle materijal. Ukrasno isečen tekstilni materijal predstavlja rep. Raznobojne trakice sa brojevima, omče i trake od tkanog tekstilnog materijala su pričvršćeni za gornju ivicu bukle materijala.	**6307 90 10**

Ista pokriva nožne prste i delove stopala pri korenu prstiju, ostavljajući petu i više od polovine stopala otvorenim, a za stopalo je pričvršćena pomoću dve elastične trake koje idu oko pete (patike za ritmičku gimnastiku) (videti fotografije Nos 633 A i B)	**6403 59 91**
32009R0895, 895/2009 of 23.9.2009, (OJ L 256, 29.09.2009, p.3). http	87/2009, 23.10.2009. https://	Boot which covers the ankle. The sole of the boot is made of rubber, yet the majority of the outer sole is cut away and allows inserts holding different outer soles to be inserted into the hollowed out area of the sole. The boots are put up in a set for retail sale together with two pairs of inserts, each holding different outer soles, and a metal tool needed to attach the inserts. One pair of inserts holds outer soles of rubber which have a deeply carved sole typical for trekking boot soles. The other pair of inserts holds outer soles of textile material (approximately 8 mm of felt), which can be used when walking in shallow water according to the importer's documentation. The sole of the boot retains a small part of the outer sole, an almost continuous rim around the edge of the sole. This small part of the outer sole is of rubber matching the trekking sole insert. The footwear cannot be used without the inserts. The insoles have a length of more than 24 cm. The upper of the boot is made up of different leather pieces sewn together leaving "windows" into which nine metallic-mesh pieces and four textile pieces are sewn. The leather makes up the greater part of the external surface area of the upper. The inside of the boot is lined with textile material. The boot is neither waterproof nor water resistant. The footwear can be used by men and women. (trekking boot) (See photographs Nos 650 A, 650 B and 650 C)	Čizma koja prekriva članak. Đon čizme je napravljen od gume, mada je veći deo đona odsečen i dopušta ubacivanje uložaka sa različitim đonovima u izdubljeni deo đona. Čizme su pripremljene kao set za prodaju na malo, zajedno sa dva para uložaka, od kojih je svaki sa drugačijim đonom, i alatkom od metala potrebnom za pričvršćivanje uložaka. Jedan par uložaka ima đonove od gume sa dubokim šarama tipičnim za đonove čizama za pešačenje (planinarenje). Drugi par uložaka ima đonove od tekstilnog materijala (debljine približno 8 mm, od filca), koji se mogu, prema dokumentaciji uvoznika, upotrebiti za hodanje po plićacima . Od đona je zadržan mali deo skoro neprekidnog ruba oko njegove ivice. Taj mali deo đona je od gume koja odgovara đonu-ulošku za pešačenje (planinarenje). Obuća se ne može upotrebiti bez uložaka. Unutrašnji đonovi su duži od 24 cm. Gornjište čizme je napravljeno od različitih komada kože koji su zašiveni tako da ostavljaju prazne prostore u koje je ušiveno devet komada od metalne mrežice i četiri komada od tekstila. Koža čini veći deo spoljne površine gornjišta. Unutrašnjost čizme je obložena tekstilnim materijalom. Čizma nije ni vodonepropusna ni vodootporna. Obuću mogu koristiti i muškarci i žene. (čizma za pešačenje (planinarenje))	**6403 91 13**

32011R0757, 757/2011 of 27.7.2011, (OJ L 199, 2.8.2011, p.37–39). http	63/2011, 26.8.2011. https://	Footwear not covering the ankle and not identifiable as men's or women's footwear, with insoles of a length of more than 24 cm. The outer sole is made of rubber and the mid-sole of low-density polymers. The upper consist of pieces of textile, leather and plastics. Grey textile material covers the whole surface of the upper with the exception of a piece of white textile (felt) [2 (*)] at the heel of the footwear (See photo No 655 B). This white textile material is covered by several pieces of grey leather. It is covered mainly by one piece on the heel [C (*)], and partly by two pieces along both sides of the shoe [D (*)], and two pieces curved around the instep [B (*)] (see photo No 655 C). At the furthest end of the heel this white textile material is covered by a piece of black impermeable textile material and a piece of dark grey plastic [b (*)] sewn on top (see photo No 655 C). The black textile is visible through small openings in the plastic piece. Abovementioned grey textile materials are sewn to each other and attached to the sole. On one side of the shoe two pieces of grey textile are assembled with a zigzag stitching supplemented by a saddle stitch on both sides of the zigzag stitching (see photo No 655 D). The same saddle stitches are fixing a textile strip underneath the two textile pieces to reinforce the assemblage. In the front of the shoe a piece of grey plastic [a (*)] is covering the grey textile material underneath. On both sides of the shoe pieces of grey leather [A (*)] are attached to the textile material and, on top of the leather/grey textile material, four vertical straps of textile [1 (*)] have been added, as well (see photos Nos 655 A and 655 D). In addition one textile strap is attached as a loop to the textile material at the heel of the footwear. (training shoe) (see photos Nos 655 A, 655 B, 655 C and 655 D) (**)	Obuća koja ne pokriva gležanj i koja se ne može razlikovati kao muška ili ženska obuća, sa unutrašnjim đonovima dužine ne veće od 24 cm.Spoljašnji đon izrađen je od gume, a središnji đon od polimera male gustine. Gornjište se sastoji od delova od tekstila, kože i plastične mase.Sivi tekstilni materijal pokriva celu površinu gornjišta, sa izuzetkom komada od belog tekstila (filc) [2(*)] na delu obuće za petu (videti fotografiju broj 655 B).Ovaj beli tekstilni materijal pokriven je sa nekoliko komada sive kože. U većem delu je pokriven jednim komadom na peti [C(*)], i delimično sa dva komada duž obe bočne strane obuće [D(*)], i dva komada koja su zakrivljena oko unutrašnjeg đona [B(*)] (videti fotografiju broj 655 C).Na najvišem delu na peti ovaj beli tekstilni materijal pokriven je komadom nepromočivog, crnog tekstilnog materijala i komadom od tamno sive plastične mase [b(*)] koji su na vrhu prišiveni (videti fotografiju broj 655 C). Crni tekstil vidljiv je kroz male otvore u komadu od plastične mase.Gore navedeni sivi tekstilni materijali prišiveni su jedan za drugi i pričvršćeni za spoljašnji đon. Na jednoj bočnoj strani obuće dva komada sivog tekstila su povezana cik-cak bodom sa dodatnim šavovima sa ravnim bodom sa oba kraja cik-cak boda. Isti ovi šavovi, ravnog boda, pričvršćuju tekstilnu traku ispod dva komada tekstila, kako bi ojačali spoj.Na prednjem delu obuće komad sive plastične mase [a(*)] pokriva sivi tekstilni materijal koji se nalazi ispod njega.Na obe bočne strane obuće komadi sive kože [A(*)] pričvršćeni su za tekstilni materijal a, povrh kože/sivog tekstinog materijala, takođe su dodate i četiri vertikalne tekstilne trake [1(*)]. Pored svega, jedna tekstilna traka pričvršćena je na tekstilni materijal na peti obuće, u vidu petlje.(patike)(videti fotografije broj 655, 655 B, 655 C i 655 D) (**)	**6404 11 00**

32009R0872, 872/2009 of 18.9.2009, (OJ L 249, 23.09.2009, p.3). http	87/2009, 23.10.2009. https://	Footwear with outer soles of plastics and a vamp made of straps, attached to the sole at three points. The vamp extends from the left side of the sole to the right side. The arch formed by this part of the vamp is also attached to the sole by means of a strap extending from the middle of the arch down into the sole separating the toes. The vamp of the footwear in question is made up of several layers of different materials. The two straps forming the arch consist of a layer of textile (textile straps T1 and T2 in the photos) on top of which a layer of leather is sewn (two leather straps C1 in the photos). On top of this leather another smaller layer of leather is sewn (two leather straps C2 in the photos) with a brightly coloured textile thread. In between the textile layer (T1/T2) and the leather layer (C1) two non-visible straps (of plastic) (strap A in the photo 646 D) are inserted, one on each side of the arch. In the centre of the arch the two textile straps (T1 and T2) and the four leather straps (C1 and C2) are sewn together with one single thread (see photo 646 C). In the centre of the arch the textile strap separating the toes encircles all before-mentioned materials of the arch by forming a loop around them (textile strap T3 in the photos). The textile strap is partly exposed. On top of this textile loop, in the centre of the arch, there is a rectangular piece of leather sewn onto the textile loop and the aforementioned materials of the arch (rectangular piece of leather C3 in the photos). On the left and right side of the arch, at the point where it is fixed to the sole, several of the straps forming the arch are inserted and glued into the sole. Whereas the leather straps C1 are inserted in the sole with barely 1 cm of their length and the leather straps C2 are inserted only with approximately 5 mm of their length, the textile straps T1 and T2 are inserted into the sole with 5 cm of their length (see photo 646 E). ("thong" sandal) (See photographs Nos 646 A, 646 B, 646 C, 646 D and 646 E)	Obuća sa đonovima od plastične mase, sa prednjim lubom napravljenim od traka, koje su na tri mesta pričvršćene za đon. Lub se prostire od leve do desne strane đona. Svod formiran od ovog dela prednjeg luba, takođe je pričvršćen za đon pomoću trake koja ide od sredine svoda do đona razdvajajući palčeve. Prednji lub predmetne obuće izrađen je od nekoliko slojeva različitih materijala. Dve trake koje čine svod, sastoje se od sloja tekstilnog materijala (tekstilne trake T1 i T2 na fotografijama) preko kojeg je našiven sloj od kože (dve kožne trake S1 na fotografijama). Preko ove kože našiven je drugi manji sloj kože (dve kožne trake S2 na fotografijama) sa tekstilnim koncem jarke boje. Između tekstilnog sloja (T 1/T2) i kožnog sloja (S1) umetnute su dve trake koje se ne vide (od plstične mase) (traka A na fotografiji 646 D), po jedna sa svake strane svoda. Na centru svoda dve tekstilne trake (T1 i T2) i četiri kožne trake (S1 i S2) prošivene su zajedno jednim koncem (videti fotografiju 646 S). Na centru svoda, tekstilna traka koja razdvaja palčeve obavija sve prethodno pomenute materijale svoda praveći omču oko njih (tekstilna traka T3 na fotografiji). Tekstilna traka je delimično izložena. Preko ove tekstilne omče, na centru svoda, nalazi se pravougaoni komad kože našiven na tekstilnu omču i prethodno pomenute materijale svoda (pravougaono parče kože S3 na fotografiji). Na levoj i desnoj strani svoda, na mestima gde je on fiksiran za đon, nekoliko traka koje čine svod su ubačene u đon i zalepljene. Dok su kožne trake S1 ubačene u đon sa svega 1 cm od njihove dužine a kožne trake S2 ubačene sa svega približno 5 mm njihove dužine, tekstilne trake T1 i T2 ubačene su u đon sa 5 cm njihove dužine (videti fotografiju 646 E). ("japanke")	**6404 19 90**

32010R1155, 1155/2010 of 1.12.2010, (OJ L 324, 9.12.2010, p.42-44). http	2/2011, 18.1.2011. https://	Composite goods made up of an artificial cherry tree branch and an electric lighting fitting with an electrical transformer. These components are attached to each other to form a practically inseparable whole. The artificial branch resembles the natural product (a cherry tree branch with blossoms), made by assembling various parts (brown paper to imitate the twigs, wires to support them, adhesive bands to hold them together, white textile fabric imitating the petals of the blossoms and small plastic parts sustaining the blossoms). The parts are bound, glued and fitted together. An electric light chain holding 60 micro electric bulbs is integrated into the artificial branch. The light bulbs represent the pistils of the blossoms. Due to their size the light bulbs give little illumination effect. The electric wire of the light chain holding the micro light bulbs is completely covered by the branch. The remaining, several metre long, electric wire leaves the main branch and ends in an electrical transformer. The article is neither self-standing nor does it have any means by which it can be hung. It is designed to be placed in a vase. (artificial cherry tree branch) (See photographs no. 654 A, B and C)	Složena roba izrađena od veštačke trešnjeve grane i električnih svetlećih tela sa električnim transformatorom. Ove komponente su povezane međusobno i čine praktično nerazdvojnu celinu. Veštačka grana liči na prirodnu (trešnjeva grana u cvetu), izrađena je sastavljanjem različitih delova (braon hartije koja imitira grančice, žice koje ih podupiru, lepljive trake da ih drže zajedno, bele tekstilne tkanina koja imitira latice cvetova i malih plastičnih delova koji drže cvetove). Delovi su povezani, zalepljeni i međusobno sastavljeni. Lanac električnih lampi koji sadrži 60 mikro sijalica pričvršćen je u veštačku granu. Sijalice predstavljaju tučkove cvetova. Zbog svoje veličine sijalice daju mali svetlosni efekat. Električna žica, lanca električnih lampi koji sadrži mikro sijalice, je potpuno sakrivena granom. Ostatak električne žice, dugačak nekoliko metara, izlazi iz glavne grane i završava u električnom transformatoru. Proizvod niti može da stoji samostalno, niti ima bilo koji deo pomoću kog može biti vešan. Napravljen je da stoji u vazi. (veštačka trešnjeva grana) (Videti fotografije br. 654 A, B i C) (*)	**6702 90 00**

32014R1215, 1215/2014 of 11.11.2014, (OJ L 329, 14.11.2014, p. 11–13). http	137/2014, 16.12.2014. https://	A solar panel with dimensions of approximately 2 × 2 m, consisting of 25 glass vacuum tubes mounted in parallel and interconnected via a collector pipe. Each vacuum tube is constituted by two concentric pipes, containing heat transfer fluid. The inner pipe of each tube is coated with an absorption layer. The solar energy is absorbed by the layer on the inner pipe of the tubes and converted into heat energy. The heat is then transferred to the heat transfer fluid, which turns into gas, rises and transfers the heat to the collector pipe (a copper manifold). The heat is subsequently transferred from the collector pipe to a water storage tank by way of a tubing system containing heat transfer fluid circulating by means of a pump managed by a controller. The pump, controller, tubing system and water storage tank are not included upon presentation. The solar panel is used in solar water heating systems and is intended to be mounted on the roof.	Solarna ploča dimenzija približno 2 x 2 m, sastoji se od 25 staklenih vakuumskih cevi ugrađenih paralelno i međusobno vezanih preko kolektorske cevi. Svaka vakuumska cev sastoji se od dve koncentrične cevi i sadrži fluid za prenos toplote. Unutrašnja cev svake vakuumske cevi prevučena je apsorpcionim slojem. Sloj na unutrašnjoj cevi vakuumske cevi apsorbuje solarnu energiju i pretvara je u toplotnu energiju. Toplota se, potom, prenosi do fluida za prenos toplote, koji prelazi u gas, koji se diže i prenosi toplotu do kolektorske cevi (bakarni cevovod). Toplota se, potom, prenosi od kolektorske cevi do tanka za vodu, putem sistema cevi koje sadrže fluid za prenos toplote koji cirkuliše pomoću pumpe kojom upravlja kontroler. Pumpa, kontroler, sistem cevi i tank za vodu nisu uključene u isporuku. Solarna ploča se koristi za sisteme za zagrevanje vode i namenjena je za ugradnju na krov.	**8419 19 00**

The reader may be held in the hand, placed on a surface or attached to a wall, etc. It may be used on its own or as a peripheral unit for the processing of data, such as in banking, business or medical areas, in controlling access to vehicles, or in working-time management, with or without being connected to an automatic data-processing machine	Čitač mikroprocesorske kartice ('smart-card'), smešten u plastičnom ili metalnom kućištu sa otvorom za ubacivanje pametne kartice, ekranom sa tečnim kristalima, i tastaturom (sa deset numeričkh tastera, jednim tasterom za potvrđivanje i jednim tasterom za korekciju). Čitač se može držati u ruci, staviti na površinu ili zakačiti na zid, itd. Može se koristiti samostalno ili kao periferna jedinica za obradu podataka, kao što su bankarski poslovi ili u medicinskoj oblasti, u upravljanju ulaska u vozilo, ili u sistemu upravljanja radnim vremenom	**8471 90 00**
32016R1760, 2016/1760 of 28.9.2016, (OJ L 269, 4.10.2016, p. 6–8). http	87/2016, 24.10.2016. https://	An apparatus consisting of a bank note validator and cash boxes (so called ‘note float unit’) with total dimensions of approximately 10 × 24 × 44 cm. | The bank note validator uses optical scanning technology to check the authenticity of bank notes according to predefined specifications. | Bank notes that are approved by the validator pass to a cash box. When this cash box has reached its capacity (generally 30 bank notes), the bank notes are automatically sorted and distributed towards other cash boxes with a capacity of generally 300 bank notes. | The apparatus is used, for example, in gaming, vending, parking machines etc. to pay for the service or for the product obtained. | The apparatus is also capable of dispensing bank notes. | The apparatus is always connected to a so-called ‘host-controller’ (not present upon presentation) which regulates the predefined bank note specifications and the bank note flow to the different cash boxes. | See image (*).	Aparat se sastoji od validatora (uređaj za potvrdu vaLjanosti novčanica) i kasete za novac (jedinica za proveru i isplatu novčanica) ukupnih dimenzija približno 10 × 24 × 44 cm. Validator koristi tehnologiju optičkog skeniranja za kontrolu autentičnosti novčanica u skladu sa prethodno definisanim specifikacijama. Novčanice koje odobri validator prenose se u kasetu za novac. Kada ova kaseta za novac dostigne svoj kapacitet (uglavnom 30 novčanica), novčanice se automatski sortiraju i raspodeLjuju u druge kasete za novac sa kapacitetom od uglavnom 300 novčanica. Aparat se koristi, na primer, u mašinama za igranje, prodaju, parkiranje itd. za plaćanje dobijenih usluga ili proizvoda. Aparat je uvek povezan sa tzv. „host-kontrolerom” (ne nalazi se u isporuci) koji reguliše prethodno definisane specifikacije novčanica kao i tok novčanica u različite kasete za novac. 32003R1386, 1386/2003 of 1.8.2003, (OJ L 196, 2.8.2003, p.19). http	73/2010, 12.10.2010. https://	Digital stencil duplicator, with a scanner for the digitisation and electronic processing of the text and images to be reproduced. The apparatus uses a stencil (master) consisting of a vegetable-fibre film with a plasticised coating on which the data are burned by means of a thermal head. The burned stencil is conveyed to a printing drum and fixed there. The paper sheets for printing are held against the drum under the pressure of a roller.The apparatus has a multi-speed printing system (60, 80, 100 and 120 copies per minute). It is equipped with a control panel incorporating a liquid crystal display, an automatic sorter, paper-trays, and a receiving tray with side-guides.The machine functions as a stand-alone apparatus, but can be connected to an automatic data-processing machine	Digitalni uređaj za matrično umnožavanje, sa skenerom za digitalizaciju i elektronskom obradom teksta i imidža koji se reprodukuju. Uređaj koristi matricu (master) koja se sastoji od tankog sloja od biljnih vlakana sa plastičnom prevlakom na koju su podaci nasnimljeni preko termičke glave. Tako nasnimljena matrica se namotava na bubanj za štampanje i na isti fiksira. Listovi papira za štampanje pod pritiskom valjkad drže se za bubanj. Uređaj ima sistem sa više brzina štampanja (60, 80, 100 i 120 kopija u minuti). Opremljen je upravljačkom pločom sa ugrađenim ekranom sa tečnim kristalima, automatsku sortirku, kasete za papir, i uvlakač papira sa bočnim vođicama. Mašina radi kao samostalni uređaj, ali se može povezati i sa mašinom za automatsku obradu podataka.	**8472 10 00**
31994R3272, 3272/94 of 27.12.1994, (OJ L 339, 29.12.1994, p.58). http	117/2012, 12.12.2012. https://	Steel ball, coated with silicon-rubber and meeting the following specifications: shore-hardness (A-type) of 70 +/- 5, raised moulding parting-line not exceeding 0,05 mm, diameter not exceeding 22 mm, and total weight of 31 g (+/- 1 g), designed for use in the manufacture of a pointing-device (so-called 'computer mouse')	Čelična kugla, prevučena silikonskom gumom koja odgovara sledećoj specifikaciji: tvrdoća po Shore metodi (tip A) od 70 +/- 5, visina linije razdvajanja pri livenju nije veće od 0,05 mm, prečnik ne veći od 22 mm, i ukupna masa 31 g (+/- 1 g), izrađena za upotrebu u proizvodnji pokaznih uređaja (tzv. „kompjuterski miš“)	**8473 30 80**
32014R0759, 759/2014 of 10.7.2014, (OJ L 207, 15.7.2014, p. 7–9). http	108/2014, 10.10.2014. https://	A non-self-propelled machine (so-called ‘beach rake machine’) for cleaning sand beaches with dimensions of approximately 4 × 2,3 × 2,3 m. It is used for sifting and cleaning sand of impu-rities, such as glass, plastic, cigarette butts, straws, cans, stones, sea grass, seaweed, small pieces of wood. The machine levels the sand surface by means of a mouldboard deflector plate. The sand is then sifted through hundreds of stainless steel spring-loaded tines. Finally, the impurities are separated from the sand and carried on a conveyor into a hopper.	Nesamohodna mašina (tzv. "grabulje za čišćenje plaže") za čišćenje peščanih plaža dimenzija približno 4 x 2,3 x 2,3 m. Upotrebljava se za prosejavanje i čišćenje peska od nečistoća kao što su staklo, plastika, opušci, slamke, limenke, kamenje, morska trava, alge, mali komadi drveta. Mašina poravnava površinu peska pomoću plužne odbojne ploče. Pesak se potom prosejava kroz stotine zubaca sa oprugama od nerđajućeg čelika. Na kraju, nečistoća se odvaja od peska i odvodi pokretnom trakom u levak.	**8479 10 00**

32019R0644, 2019/644 of 15.4.2019, (OJ L 110, 25.4.2019, p. 4–6). http	38/2019, 31.5.2019. https://	An apparatus for the precise transfer of liquid droplets (so-called 'liquid handler') measuring approximately 540 × 680 × 930 mm and weighing approximately 128 kg./The apparatus consists of two devices for receiving microplates (source plate and destination plate), two deionisation rods and an ultrasound head incorporated in a compact housing with a control LED, a small display and an emergency button./The apparatus utilises the Acoustic Droplet Ejection (ADE) method which uses sound energy (targeted ultrasonic pulses) to move ultralow volume of droplets of liquid from a source plate to an inverted destination plate with extremely high precision and accuracy./The system transfers droplets of 2,5 nano-litres per ejection enabling the transfer of larger volumes of liquid. Multiple droplets are ejected from the source at up to 500 times per second./The apparatus is used in the preparation of samples in laboratory sites to transfer specific volumes of reagents from one microplate to another.//	Aparat za precizni prenos kapljica tečnosti (tzv. „hendler tečnosti") dimenzija približno 540 mm × 680 mm × 930 mm i mase približno 128 kg.///Aparat se sastoji od dva uređaja za prijem mikroploča (polazna ploča i dolazna ploča), dve dejonizujuće šipke i ultrazvučne glave ugrađenje u jedinstveno kućište sa kontrolnom LED diodom i malim displejem i tasterom za uzbunjivanje.///Uređaj koristi metod akustičnog izbacivanja kapljica (Acoustic Droplet Ejection (ADE)) koji koristi zvučnu energiju (ciljana ultrazvučna pulsacija) za pomeranje ultramale zapremine kapljica tečnosti sa polazne ploče na invertovanu dolaznu ploču sa ekstremno visokom preciznošću i tačnošću.///Sistem prenosi kapljice od 2,5 nanolitra po jednom izbacivanju obezbeđujue prenos velikih zapremina tečnosti. Mnogobrojne kapljice izbaciju se sa polazne ploče do 500 puta u sekundi.//Aparat se koristi u pripremanju uzoraka na licu mesta u laboratoriji za prenos određenih zapremina reagenasa sa jedne mikroploče na drugu.//	**8479 89 97**
32011R1200, 1200/2011 of 18.11.2011, (OJ L 305, 23.11.2011, p. 6–7). http	12/2012, 21.2.2012. https://	A hand-operated mechanical apparatus for dispensing a liquid into a container for titrimetric analyses (so-called "digital titrator"). The apparatus comprises an adjustable mechanical feeder with a space for a cartridge, a delivery knob, a mechanical counter, a counter reset knob and a hand grip. The titrator is a precision dispensing apparatus which, by each turning step of the delivery knob, releases a drop of the titrant being used into the liquid to be analysed (the analyte). The drop contains a specific volume of the titrant. The number of drops dispensed by the titrator is displayed on the counter. The analytic result is determined by the reaction of the analyte to the quantity of titrant dispensed. The quantity of titrant is determined by multiplying the number of drops with the specific volume of the titrant used. | 84798997 |	Ručni mehanički aparat, za odmeravanje tečnosti u sud za titrimetrijsku analizu (tzv. „digitalni titrator"). Aparat se sastoji od podesivog mehaničkog dozatora sa prostorom za patronu, dugmeta za doziranje tečnosti, mehaničkog brojača, dugmeta za resetovanje brojača i ručke. Titrator predstavlja aparat za precizno odmeravanje, koji svakim pritiskom na dugme za doziranje, oslobađa kap titranta koji se dodaje u tečnost na kojoj se vrši analiza (analit). Kap sadrži specifičnu zapreminu titranta. Broj kapi koje titrator odmerava očitava se na brojaču. Rezultat analize određen je reakcijom analita u odnosu na količinu odmerenog titranta. Količina titrana određuje se množenjem broja kapi sa specifičnom zapreminom titranta koji se koristi.	**8479 89 97**

32015R2319, 2015/2319 of 8.12.2015, (OJ L 328, 12.12.2015, p. 60–61). http	8/2016, 1.2.2016. https://	An article (so-called 'adapter' or 'rectifier') designed to convert AC current (100| –	220 V) into DC current (12 V, 3,7 A); in a plastic housing with dimensions of approximately 14 × 6 × 5 cm.	The article can be connected via a cable with a connector to the AC socket and via another cable with a specific connector to a specific game console of heading 9504.	Proizvod (tzv. „adapter" ili „ispravljač") konstruisan da pretvara AC (naizmenična) struju (100| –	220 V) u DC (jednosmerna) struju (12 V, 3,7 A); u plastičnom kućištu dimenzija približno 14 × 6 × 5 cm. Proizvod se preko kabla sa konektorom može povezati sa AC utičnicom i preko drugog kabla posebnim konektorom za posebnu konzolu za igre iz tarifnog broja 9504.	**8504 40 82**
32016R0666, 2016/666 of 26.4.2016, (OJ L 115, 29.4.2016, p. 25–27). http	53/2016, 7.6.2016. https://	A static converter in a plastic housing (a so-called 'AC/DC adapter') designed to convert alternating current (AC) (100-240 V) into direct current (DC) (12 V, 1,5 A).	The housing is equipped with a plug to connect to the AC and with an electrical cable of 1,5 m fitted with a DC-connector which enables the AC/DC adapter to be connected to different apparatus.	The AC/DC adapter is presented to supply power to a set-top box (STB). It can also be used for supplying power to a variety of other apparatus, for example, telecommunication apparatus, automatic data-processing machines, audio/video recording or reproducing apparatus, household appliances and radio navigational aid apparatus.	See image (*).	Statički konvertor (pretvarač) u plastičnom kućištu (tzv. „AC/DC adapter") konstruisan za pretvaranje naizmenične struje (AC) (100-240 V) u jednosmernu struju (DC) (12 V, 1,5 A). Kućište je opremLjeno utikačem za povezivanje na AC i sa električnim kablom od 1,5 m na kojem se nalazi DC prikLjučak koji omogućava da se AC/DC adapter poveže sa različitim aparatima. AC/DC adapter se isporučuje za napajanje „set-top" kutija (STB). Takođe se može koristiti za napajanje razlitih ostalih aparata, na primer, telekomunikacionih aparata, mašina za automatsku obradu podataka, aparata za snimanje ili reprodukciju zvuka, odnosno slike, kućnih uređaja i radio-navigacionih aparata. 32016R1957, 2016/1957 of 4.11.2016, (OJ L 301, 9.11.2016, p. 6–8). http	7/2017, 31.1.2017. https://	An article comprising electronic components; a starter, an actuator, a regulator and a stop unit (so-called 'electronic control unit (ECU)') contained in a rectangular housing of aluminium with measurements of 98 × 74 × 20 mm and a weight of 160 g.	The article supplies power to the xenon headlights of motor vehicles.	When the headlights are turned on the article firstly converts direct current (DC) 12 V from the on-board electrical system into 1 200 V DC and transmits it to the igniter (not present upon presentation). Secondly, the article converts the DC into alternating current (AC) to light the lamps and continuously generates the voltage required (85 V) to keep the lights burning sufficiently.	See image (*).	Proizvod koji se sastoji od elektronskih komponenti; pokretača, aktuatora, regulatora i jedinice za iskLjučivanje (tzv. „elektronska upravLjačka jedinica (ECU)") sadržanih u pravougaonom kućištu od aluminijuma čije su dimenzije 98 × 74 × 20 mm i masa 160 g. Proizvod obezbeđuje napajanje za prednje ksenon farove motornog vozila. Kada su farovi ukLjučeni u proizvodu se prvo jedosmerna struja (DC) 12 V iz električnog sistema vozila pretvara u 1200 V DC i prenosi na upaLjač (koji se ne isporučuje). Drugo, ovaj proizvod pretvara tu DC u naizmeničnu struju (AC) za paLjenje svetala i kontinuirano proizvodi zahtevani napon (85 V) kako bi svetla dovoLjno svetlela. Videti sliku (*)	**8504 40 90**

32017R1465, 2017/1465 of 9.8.2017, (OJ L 209, 12.8.2017, p. 5–7). http	87/2017, 27.9.2017. https://	A device (so-called 'wireless charging plate') consisting of an adapter with a cable of a length of approximately 180 cm and a charging plate. The cable has a connector to connect to the charging plate. The plate is circular shaped with a height of approximately 8 mm, a diameter of approximately 80 mm and a weight of 51 g. | The adapter converts (rectifies) alternating current (AC – 240V) into direct current (DC – 12V) and transfers this to the plate. In the plate this DC is converted (inverted) into AC and then that AC is converted into an electromagnetic field. | The device is designed to charge apparatus wirelessly. Both the plate and the apparatus being charged are equipped with 'Qi' technology, which is the standard for the wireless charging of apparatus. Wireless charging is performed via an electromagnetic field. |	Uređaj (tzv. „bežična ploča za punjenje") sastoji se od adaptera sa kablom dužine približno 180 cm i ploče za punjenje. Kabl ima konektor za povezivanje sa pločom za punjenje. Ploča je kružnog oblika visine približno 8 mm, prečnika približno 80 mm i mase 51 g. Adapter pretvara (ispravlja) naizmeničnu struju (AC – 240V) u jednosmernu struju (DC – 12V) i prenosi je na ploču. U ploči se ova DC struja pretvara (invertuje) u AC struju i onda se ta AC struja pretvara u elektromagnetno polje. Istovremeno i ploča i aparat koji se puni opremljeni su „Qi" tehnologijim, koja predstavlja standard za aparate za bežično punjenje. Bežično punjenje obavlja se preko elektromagnetnog polja. 32023R2519, 2023/2519 of 30.10.2023, (OJ L, 2023/2519, 14.11.2023). http	11/2024, 14.2.2024. https://	A radiator, with dimensions of approximately 520 × 700 × 3 500 mm, consisting of 2 to 32 (depending on the model) rectangular panels made of galvanised sheet metal with a grooved structure, surface welded to each other./ It is designed to be mounted on an oil-immersed power transformer, in order to cool down the transformer's insulating oil as it flows through the radiator. By transferring excess heat into the air, the radiator prevents the transformer from overheating./ The radiator is equipped with a flanged inlet (located on the top) and a flanged outlet (located on the bottom) that are connected (using bolts and seals) to the corresponding outlet and inlet of the transformer./ The cooling may or may not be assisted by cooling fans (for faster air flow) and/or with cooling pumps (for faster circulation of the oil) according to the individual requirements. The pumps and fans are not present at importation./ See the images (*1)/ /	Hladnjak, dimenzija približno 520 × 700 × 3 500 mm, sastoji se od 2 do 32 (u zavisnosti od modela) pravougaonih panela izrađenih od galvanizovanih metalnih listova sa žljebastom strukturom, međusobno zavarene jedna za drugu./ Konstruisan je za ugradnju na uljni električni transformator, kako bi se izolaciono ulje transformatora hladilo dok teče kroz njega. Odvođenjem viška toplote u vazduh, hladnjak sprečava pregrevanje transformatora./ Hladnjak je opremljen ulazom sa prirubnicom (nalazi se na vrhu) i izlazom sa prirubnicom (nalazi se na dnu), koji su povezani (pomoću vijaka i zaptivki) sa odgovarajućim izlazom i ulazom transformatora./ Hlađenje može ili ne mora biti potpomognuto ventilatorima za hlađenje (za brži protok vazduha) i/ili rashladnim pumpama (za bržu cirkulaciju ulja) u skladu sa individualnim zahtevima. Pumpe i ventilatori se ne isporučuju pri uvozu./ / Videti slike (*1)/ /	**8504 90 17**
32012R1110, 1110/2012 of 23.11.2012, (OJ L 329, 29.11.2012, p. 5-6). http	9/2013, 29.1.2013. https://	A charger of the direct current converter type (so-called "Universal dual-port car charger") comprising a car cigarette adapter, two USB interfaces and a light indicator. The charger has a voltage input of 12 V DC, a voltage output of 5 V DC and a current output of 500 mA or 2 × 250 mA. The charger is used for supplying power to charge various apparatus, such as mobile phones, PDA, GPS, cameras, MP3 and MP4 players.	Punjač tipa pretvarača jednosmerne struje (takozvani „univerzalni dual port punjač za cigaret upaljač u automobilu“) sastoji se od adaptera za cigaret upaljač za automobile, dva USB interfejsa i svetlosnog indikatora. Punjač ima ulazni napon od 12 V DC, izlazni napon od 5 V DC i jačinu izlazne struje od 500 mA ili 2 x 250 mA. Punjač služi za obezbeđivanje energije za napajanje različitih aparata, kao što su mobilni telefoni, PDA, GPS, fotoaparati, MP3 i MP4 plejeri.	**8504 40 90**
32010R1076, 1076/2010 of 22.11.2012, (OJ L 308, 24.11.2010, p.3-4). http	97/2010, 21.12.2010. https://	An article (so-called "common mode choke") with dimensions of approximately 3 × 3 × 2 cm (including the base plate), consisting of two coils of insulated copper wire wound on a circular ferrite core, with a ratio of 1:1. The differential mode current (signal), flowing in opposite directions through the coils, creates equal and opposite magnetic fields which cancel each other out. This results in the article presenting zero impedance to the differential mode current, which passes through unaltered. The common mode current (interference), flowing in the same direction through the coils, creates equal and in-phase magnetic fields which add together. This results in the article presenting high impedance to the common mode current, which passes through attenuated.	Proizvod (takozvana prigušnica za potiskivanje zajedničkog signala) približnih dimenzija 3 x 3 x 2 cm (uključujući podnožje) se sastoji od dva kalema izolovane bakarne žice namotane na torusnom feritnom jezgru, sa odnosom namotaja 1:1. Diferencijalna struja (signal), tekući u suprotnim smerovima kroz kalemove, stvara suprotna magnetna polja jednake vrednosti, koja se uzajamno poništavaju. To rezultuje nultom impendansom proizvoda u odnosu na diferencijalnu struju, koja prolazi nepromenjena. Zajednička struja (smetnja), tekući u istom smeru kroz kalemove, stvara jednaka i fazna magnetna polja koja se sabiraju. To rezultuje visokom impedansom proizvoda u odnosu na zajedničku struju, koja prolazi oslabljena.	**8504 50 95**

It can also record voice.The storage capacity is 128 MB.The radio-broadcast receiver can function independently.	Set pripremljen za prodaju na malu sastoji se od: prenosivog aparata na baterije za digitalno snimanje i reprodukovanje zvuka, koji sadrži sledeće komponente u jedinstvenom kućištu: sistem elektronske signalizacije sa digitalno/ analognim konverterom, fleš memoriju, kontrolne tastere , odeljak za baterije, USB plag i priključak za slušalice; radio difuzni prijemnik koji radi na baterije, sa slušalicama sa kablom za povezivanje; USB kabla; CD ROM i uputstva. Digitalni aparat za snimanje i reprodukciju zvuka snima zvuk u MP3 formatu i može se povezati na mašinu za automatsku obradu podataka preko USB porta u svrhu preuzimanja (download) ili otpremanja (upload) MP3 ili drugih formata. Takođe može da snima i glas. Kapacitet memorije je 128 MB. Radio difuzni prijemnik može da funkcioniše nezavisno.	**8519 81 95**

32012R0146, 146/2012 of 16.2.2012, (OJ L 48/1, 21.2.2012, p.5–6). http	24/2012, 30.3.2012. https://	An apparatus in a single housing with dimensions of approximately 42 × 25 × 6 cm, comprising the following components: two microprocessors, one of which is dedicated only for the Blu-Ray reader,a dual DVB-S/DVB-T digital tuner,a built-in hard disk of 250 GB,a Blu-Ray 2D and 3D reader,an SD card reader, anda "smart card" reader for conditional access to a service provider.The apparatus is equipped with the following interfaces: two RF inputs,an Ethernet (RJ-45),a USB,an HDMI,a SCART,two RCA for audio output, andan S/PDIF (optical digital audio output).Upon presentation, the apparatus is capable of receiving and decoding digital television signals (both free channels and programmes from the service provider). It is also capable of connecting to the Internet via the Ethernet interface. The apparatus is capable of receiving and decoding audio/video files from: apparatus within a local area network via a so-called "home gateway" andexternal sources via the USB interface (such as a hard disk, a USB memory, video recorders, digital cameras, camcorders) or via the SD card reader.The apparatus is capable of recording and reproducing the digital television signals received as well as any video files received through the SD card reader or the USB interface. The apparatus is capable of reproducing files from external media such as DVD, Blu-Ray 2D and 3D and CD via the integrated Blu-Ray reader.	Aparat u jednom kućištu dimenzija približno 42 x 25 x 6 cm sastoji se od sledećih komponenti: dva mikroprocesora, od kojih je jedan namenjen samo za „Blu-Ray“ čitač, dual DVB-S/DVB-T digitalnog tjunera, ugrađenog hard diska od 250 GB, „Blu-Ray“ 2D i 3D čitača, čitača za SD karticu, i čitača „pametnih kartica“ za eventualni pristup provajderu. Aparat ima sledeće interfejse: dva RF ulaza, Ethernet (RJ-45), USB, HDMI, SCART, dva RCA za audio izlaz, i S/PDIF (optičko digitalni audio izlaz), Nakon prezentacije aparat može da prima i dekodira digitalne televizijske signale (besplatne kanale kao i programe od provajdera). Takođe može da se poveže na internet preko Ethernet interfejsa. Aparat može da prima i dekodira audio/video datoteke podataka sa: aparata iz lokalne mreže preko tzv. „kućnog gejtveja“ i eksternihe izvora preko USB interfejsa (kao što su hard disk, USB memorija, video rekorderi, digitalne kamere, kamkorderi) ili preko čitača SD kartica. Aparat ima mogućnost da snima i reprodukuje primLjene digitalne televizijske signale kao i bilo koje video datoteke podataka primLjene preko čitača SD kartica ili USB interfejsa. Aparat ima mogućnost da reprodukuje datoteke podataka sa ekstrnih medija kao što su DVD, „Blu-Ray“ 2D i 3D i CD preko integrisanog „Blu-Ray“ čitača.	**8521 90 00**

32015R0020, 2015/20 of 5.1.2015, (OJ L 4, 8.1.2015, p. 7–9). http	31/2015, 1.4.2015. https://	An electronic apparatus (so-called ‘media server’) comprising a built-in flash memory of 2 TB, a hard disk with a storage capacity of 4 TB and a MPEG processor for various video, picture and audio formats. The apparatus is equipped with, amongst others, the following interfaces: | – | two 1Gbe (GigaBit ethernet) copper ingest ports, used for reception, | – | two 10Gbe SFP type, (Small Form-factor Pluggable) streaming ports, used for transmission, | – | two 1Gbe copper management ports for the management of the apparatus, | – | two USB ports. The apparatus uses the following media formats: | – | MPEG-2 TS and MPEG-4 (H.264), | – | Variable Bitrate (VBR) and Constant Bitrate (CBR), | – |High-Definition (HD) and Standard-Definition (SD). The apparatus is able to provide up to 2 500 streams with a speed of 3,75 Mbps. The apparatus is used by cable or internet television providers for distributing on demand multimedia products to consumers. Multimedia products, such as video sequences, pictures, data and sound are exchanged (received and transmitted) among media servers, installed within the providers' network. The apparatus records the received content and transmits it on demand via OTT (Over the Top Technology) streaming to the clients' terminal equipment, for example, television sets, automatic data-processing machines, game consoles or mobile phones.	Elektronski aparat (tzv. "medijski server") sastoji se od ugrađene fleš memorije od 2 TB, hard diska kapaciteta 4 TB i MPEG procesora za različite video, slikovne i audio formate. Aparat je opremljen, između ostalog, sledećim interfejsima: - dva bakarna ulazna porta od 1 Gbe (GigaBit eternet), koji se koriste za prijem, - dva porta SFP tipa (Small Form-factor Pluggable) za striming, od 10 Gbe, koji se koriste za prenos, - dva bakarna upravljačka porta. od 1 Gbe, za upravljanje aparatom, - dva USB porta. Aparat podržava sledeće medijske formate: - MPEG-2 TS i MPEG-4 (H.264), - promenljivi bitni protok - VBR i konstantni bitni protok - CBR, - visoku rezoluciju - HD i standardnu rezoluciju - SD. Aparat može da obezbedi do 2500 strimova brzinom od 3,75 Mbps. Aparat koriste kablovski i internet provajderi za distribuciju multimedijalnih proizvoda "na zahtev", do korisnika. Multimedijalni proizvodi kao što su video sekvence, slike, podaci i zvuk se razmenjuju (primaju i prenose) između medijskih servera, instaliranih u okviru mreže provajdera. Aparat snima sadržaj koji prima i prenosi ga, na zahtev, putem OTT (Over the Top Technology) striminga, do terminalne opreme klijenta, npr. TV prijemnika, mašina za automatsku obradu podataka, konzola za igrice ili mobilnih telefona.	**8525 60 00**

32011R1249, 1249/2011 of 29.11.2011, (OJ L 319, 2.12.2011, p. 39–40). http	12/2012, 21.2.2012. https://	A portable battery-operated apparatus for capturing and recording video, with dimensions of approximately 10 × 5,5 × 2 cm (so-called "pocket sized video recorder") comprising: a camera lens and a digital zoom,a microphone,a loudspeaker,an LCD display with a diagonal measurement of the screen of approximately 5 cm (2 inches),a microprocessor,a memory of 2 GB, andUSB and AV interfaces.The apparatus is only capable of capturing and recording video files in the form of sequences of images in MPEG4-AVI format. Video is recorded in a resolution of 640 × 480 pixels at 30 frames per second for a maximum of 2 hours. Video sequences recorded by the apparatus can either be transferred to an automatic data-processing (ADP) machine, via the USB interface, without modifying the format of the video files, or to a digital video recorder, a monitor or a television set via the AV interface. Video files can be transferred to the apparatus from an ADP machine, via the USB interface. | 85258099 |	Prenosivi aparat na baterije za kapturisanje i snimanje video sadržaja, dimenzija približno 10 x 5,5 x 2 cm (takozvani „džepni video rekorder“) sastoji se od: sočiva za kameru i digitalnog zuma, /mikrofona, /zvučnika, /LCD displeja sa dijagonalom ekrana približno 5 cm (2 inča), /mikroprocesora, /memorije od 2 GB, i /USB i AV interfejsa. Aparat može samo da kapturiše i snima video datoteke u MPEG-AVI formatu. Video se snima u rezoluciji 640 x 480 piksela, sa 30 frejmova u sekundi, najduže 2 sata. Video sekvence snimljene aparatom mogu se preko USB interfejsa poslati ili na mašinu za automatsku obradu podataka (AOP), bez modifikovanja formata video fajlova, ili preko AV interfejsa na digitalni video rekorder, monitor ili televizijski aparat. Video datoteke se, preko USB interfejsa, sa AOP mašine mogu poslati na aparat.	**8525 80 99**
32002R0687, 687/2002 of 22.4.2002, (OJ L 106, 23.4.2002, p.3). http	95/2010, 17.12.2010. https://	Hand-held global-positioning device (of dimensions H x W x D = 8 x 17,3 x 6,5 cm), with a 16-colour LCD-display (of a diagonal screen measurement of 10,4 cm) and several control buttons. The device has a 12-parallel-channel receiver capable of continuously tracking and using twelve satellites to compute and update positions, as well as a detachable antenna, and operates using either batteries or a 10 to 35 V DC-adaptor. It is supplied with the following accessories: yoke mount, a low-profile remote antenna, a cigarette-lighter adaptor, a cable to update data, a manual and a carrying-case	Ručni GPS uređaj (sistem za globalno pozicioniranje) (dimenzija V h Š h D = 8 x 17,3 x 6,5 cm), sa LCD displejem sa 16 boja (sa dijagonalnom dimenzijom ekrana od 10,4 cm) i nekolikko upravljačkih tastera. Uređaj poseduje prijemnik sa 12 paralelnih kanala koji ima mogućnost kontinuiranog praćenja („tracking”) i korišćenja 12 satelita za proračunavanje i ažuriranje lokacija, kao i antenu koja se može skinuti, a radi koristeći ili osam baterija ili 10-35 V DC adapter (adapter jednosmern sturje). Opremljen je sledećim dodatnim priborom: omča za nošenje, kratkom prenosnom antenom („low profile”), adapterom za upaljač za cigarete, kablom za ažuriranje podataka, uputstvom i torbicom za nošenje. The apparatus also comprises an audio amplifier, two loudspeakers and power and control buttons and is presented with a remote control. The apparatus has the following interfaces: VGA In, DVI-D In/Out, HDMI, CVBS (AV), RS232C In/Out, Audio In/Out and LAN. The apparatus is presented for use as a component in LCD video walls. The integrated ADP machine is used as a video wall processor for providing video wall control over a network of up to 5 × 5 video wall configurations. The apparatus can work autonomously as a monitor or as an ADP machine.	Aparat (tzv. "LCD displej video zida") sastoji se od monitora u boji LCD tehnologije i mašine za automatsku obradu podataka (AOP), dimenzija približno 91 x 53 x 12 cm. Monitor sa dijagonalom ekrana približno 102 cm (40 inča) ima sledeće karakteristike: - prirodnu rezoluciju 1920 x 1080 piksela, - razmeru slike 16 : 9, - veličinu piksela 0,46125 mm, - vreme odziva 8 ms, - maksimalno osvetljenje 700 cd/m2, - tipični odnos kontrasta 500:1, - horizontalni i vertikalni ugao gledanja 178° - mogućnost "slika u slici" (PIP). Ugrađena AOP mašina sadrži mikroprocesor, memoriju od 1 GB i hard disk drajv od 40 GB. Aparat takođe sadrži audio pojačavač, dva zvučnika i tastere za uključivanje/isključivanje i upravljanje i isporučuje se sa daljinskim upravljačem. Aparat ima sledeće interfejse: VGA ulaz, DVI-D ulaz/izlaz, HDMI, CVBS (AV), RS232C ulaz/izlaz, audio ulaz/izlaz i LAN. Aparat se isporučuje da se koristi kao komponenta u LCD video zidovima. Ugrađena AOP mašina služi kao procesor video zida i omogućava upravljanje video zidom preko mreže, konfiguracije video zida najviše do 5 x 5. Aparat može da radi samostalno kao monitor ili kao AOP mašina.	**8528 59 31**

Set pripremljen za prodaju na malo (takozvani "sistem bežične retrovizor kamere") instalira se u motorna vozila i sadrži sledeće komponente: - dnevnu i noćnu televizijsku kameru sa CMOS senzorom i sočivima od 2,4 mm, - bežični predajnik video signala sa antenom, - bežični prijemnik od 2,4 GHz za video signale, sa LCD displejom u boji dijagonalne dimenzije ekrana 17,8 cm (7 inča) i rezolucijom 480 x 240 piksela. Opremljen je funkcijskim tasterima i AV interfejsom za povezivanje sa eksternim audio ili video aparatima. Televizijska kamera ne snima zvuk. Proizvod je konstruisan za upotrebu u, na primer, u automobilima, vozilima ili prikolicama, i omogućava vozaču da vidi šta je iza njega.	**8528 72 40**
32012R0103, 103/2012 of 7.2.2012, (OJ L 36, 9.2.2012, p. 17–18). http	24/2012, 30.3.2012. https://	A modular screen panel (so-called "LED wall") comprising several modules made of tiles, each tile measuring approximately 38 × 38 × 9 cm. Each tile contains red, green and blue light emitting diodes and has a resolution of 16 × 16 pixels, a dot pitch of 24 mm, a brightness of 2 000 cd/m2 and a refresh rate of more than 300 Hz. They also contain drive electronics. The panel is presented together with a processing system comprising: | – | a video processor accepting various signal inputs (such as CVBS, Y/C, YUV/RGB, (HD-) SDI or DVI) and allowing the scaling of an image/video to the screen panel size, and| – | a signal processor allowing the pixel mapping of the input signal to the screen panel. The processed signal is sent from the signal processor to a data distributor using optical fibre cables. The data distributor sends in turn the data to the various tiles of the screen panel. The panel is not designed for viewing at close distance. It is used for sport/entertainment events, retail signage, etc.	Nesastavljen modularni ekran (tzv. "LED video zid") sastoji se od nekoliko modula u obliku ploča, od kojih je svaka dimenzija približno 38 x 38 x 9 cm. Svaka ploča sadrži LED diode sa emitujućom crvenom, zelenom i plavom svetlošću i ima rezoluciju 16 x 16 piksela, rastojanje između tačaka 24 mm, osvetljenost 2000 cd/m² i frekvenciju osvežavanja veću od 300 Hz. Takođe sadrži elektroniku za napajanje. Ekran se isporučuje sa sistemom za obradu koji je sastavljen od: - video procesora koji prima različite ulazne signale (kao što su CVBS, Y/C, YUV/RGB, (HD-) SDI ili DVI) i omogućava skaliranje slike/videa do veličine ekrana, i - procesora signala koji omogućava mapiranje piksela ulaznog signala na ekran. Obrađeni signal se, putem kablova od optičkih vlakana, šalje sa procesora signala do distributora podataka. Distributor podataka naizmenično šalje podatke na različite ploče ekrana. Panel se isporučuje kao podoban za sportske ili zabavne događaje, oglašavanje prodaje, itd, ali ne kao podoban za gledanje iz blizine.	**8528 59 39**

32014R1036, 1036/2014 of 25.9.2014, (OJ L 287, 1.10.2014, p. 6–8). http	137/2014, 16.12.2014. https://	A printed circuit assembly presented for incorporation into a reception apparatus for television incorporating a LCD screen and a video reproducing apparatus. The assembly comprises the following interfaces for connecting with external apparatus: | – | VGA input, | – | HDMI inputs (HDCP supported), | – | RGB video inputs (SCART connectors), | – | video component input, | – | CVBS video input and output, | – | audio input and output, | – | loudspeaker output, | – | USB socket. The assembly also comprises several internal interfaces, for example, a low-voltage differential signalling (LVDS) interface for connecting with a LCD screen and an interface to the internal power supply. The assembly does not incorporate a so-called 'tuner' comprising radio frequency circuits (RF block), intermediate frequency circuits (IF block) and demodulation circuits (DEM block), for the reception of digital television signals. The LCD screen is not included upon presentation. The assembly performs several functions, for example, analogue-digital conversion, video decoding (for example, MPEG4), scaling, audio decoding, audio amplification, HDMI receiver and LVDS output transmitter for an LCD screen. In addition to standard video or television signals, the scaler is also able to process several incoming resolutions of the automatic-data processing (ADP) machine type (up to 1 920 × 1 080 pixels) into the native resolution of a LCD screen. The assembly is able to reproduce images and sound from an USB memory.	Sklop štampanih kola isporučen za ugradnju u televizijski prijemnik sa ugrađenim LCD ekranom i aparatom za reprodukciju slike. Sklop obuhvata sledeće interfejse za povezivanje sa spoljašnjim aparatima: - VGA ulaz - HDMI ulaze (sa HDCP podrškom) - RGB video ulaze (SCART konektori), - ulaz za video komponentu, - CVBS video ulaz i izlaz, - audio ulaz i izlaz, - izlaz za zvučnik - USB utičnicu. Sklop takođe obuhvata nekoliko unutrašnjih interfejsa, na primer, niskonaponski diferencijalni signalni interfejs (LVDS) za povezivanje sa LCD ekranom i interfejs za unutrašnje napajanje. Sklop ne sadrži tzv. "tjuner" koji se sastoji od radio frekventnog kola ("RF blok"), međufrekventnog kola ("IF blok") i kola za demodulaciju ("DEM blok"), za prijem digitalnih televizijskih signala. LCD ekran nije uključen u isporuku. Sklop vrši nekoliko funkcija, na primer, analogno-digitalnu konverziju, video dekodiranje (na primer, MPEG4), skaliranje, audio dekodiranje, audio pojačavanje, HDMI prijem i LVDS izlazni prenos na LCD ekran. Pored standardnih video ili televizijskih signala, skaler takođe može da obradi nekoliko dolaznih rezolucija sa mašine tipa AOP (do 1920 x 1080 piksela) na prirodnu rezoluciju LCD ekrana. Sklop može da reprodukuje slike i zvuk sa USB memorije.	**8529 90 65**

(*) See image 1.	Proizvod (tzv. "električni filter") sastoji se od višeslojnog keramičkog provodnog kondenzatora za površinsku montažu, dimenzija približno 8 x 3 x 3 mm. Isporučuje se kao niskopropusni filter koji se koristi kao filter elektromagnetnih smetnji (EMI), na primer, u pojačavačima struje, napajanjima, kontrolerima temperature i motora i u upravljačkim kolima.(*) Videti sliku 1.	**8532 24 00**
32010R0717, 717/2010 of 6.8.2010, (OJ L 210, 11.8.2010, p.24–25). http	65/2010, 14.9.2010. https://	A product (so-called "exhaust gas temperature sensor") consisting of: a thermistor with a power handling capacity not exceeding 20 W, in its own housing,a fixing bolt,a shaft facilitating fixation inside a vehicle's exhaust system,an electrical cable, with a heat resistant sleeve, which connects the product to a plug and which, in turn, enables connection to the vehicle's engine management system.Depending on the temperature, the thermistor changes its resistance. When connected, this change of resistance produces a change of electrical current, which is transmitted to the engine management system. The product cannot convert the electrical current output into a temperature measurement or display the temperature.	Proizvod (takozvani „temperaturni senzor izduvnog gasa") sastoji se od: termistora snage ne preko 20 W, u sopstvenom kućištu,/ vijka za fiksiranje,/ osovine za olakšano fiksiranje u izduvnom sistemu vozila, / i/ električnog kabla, sa toplotno otpornim plaštom, koji povezuje proizvod sa utikačem a koji, zauzvrat, omogućava povezivanje sa sistemom za upravljanje motorom vozila. U zavisnosti od temperature, termistor menja svoj otpor. Kada je povezan, ova promena otpora stvara promenu električne struje, koja se prenosi na upravljački sistem motora. Proizvod ne može pretvarati izlaz električne struje u temperaturno merenje ili prikazivati temperaturu.	**8533 21 00**

32014R0457, 457/2014 of 29.4.2014, (OJ L 133, 6.5.2014, p. 35–38). http	78/2014, 25.7.2014. https://	A digital electronic apparatus with four High- Definition Multimedia Interfaces (HDMI) inputs, one HDMI output and a button for selecting the input (so-called 'active HDMI switch'). It incorporates an amplifier for regenerating weak signals, 4 LEDs for indicating the selected input and is supplied with 5 V DC. The apparatus supports full 1080p video signals with a data transfer up to 2,5 Gbps and the High-bandwidth Digital Content Protection (HDCP) protocol. The apparatus is used for selecting one HDMI input to be connected to the HDMI output. It allows the selection of HDMI signals origin- ating from different sources (for example, a DVD player, a set-top box) to be connected to one apparatus, for example, a television set.	Digitalni elektronski aparat sa četiri HDMI ulaza (multimedijalni interfejsi visoke rezolucije), jednim HDMI izlazom i tasterom za biranje ulaza (takozvani "aktivni HDMI preklopnik"). Ima ugrađen pojačavač za regeneraciju slabih signala, četiri LED diode za označavanje izabranog ulaza i napaja se jednosmernom strujom napona 5V. Aparat podržava pun 1080p video signal sa prenosom podataka do 2,5 Gbps i HDCP protokol (zaštita širokopojasnog digitalnog sadržaja). Aparat se upotrebljava za biranje jednog HDMI ulaza koji će se povezati sa HDMI izlazom. On dopušta da se izabrani HDMI signali koji potiču iz različitih izvora (na primer, DVD plejer, set-top boks) povežu na jedan aparat, na primer, televizijski prijemnik.	**8543 70 90**
32016R0663, 2016/663 of 26.4.2016, (OJ L 115, 29.4.2016, p. 16–18). http	53/2016, 7.6.2016. https://	An electronic machine functioning as an audio interface or a sound mixer (so-called 'mixer-converter analogue/digital pre-amplifier device'), with dimensions of approximately 48 × 18 × 9 cm. It consists of sound and effects processors, an analogue-to-digital and digital-to-analogue converter and a microphone amplifier, in a housing with operating and display elements and various analogue, optical and digital inputs and outputs as well as FireWire ports. | It has the following main technical features: | – | hybrid FireWire/USB2 connectivity (capability to be connected to an automatic data-processing (ADP) machine), | – | 28-input mixer with digital signal processing effects; | – | special mixing software, | – | separate front-panel headphone jacks, each with independent volume control, and | – | front panel LED status clock. | The machine is designed for use in digital music productions in sound studios or live on stage. It can operate in two modes: in conjunction with an ADP machine or in a stand-alone mode. | When the machine is used in conjunction with an ADP machine, it serves for converting and processing audio signals supplied from external audio sources and for the pre-amplification of microphone signals. In stand-alone mode, the machine can be used as a mixer with integrated effects.	Elektronska mašina koja radi kao audio interfejs ili mikser zvuka (tzv. „analogno-digitalni mikser-pretvarač i pretpojačavač"), dimenzija približno 48 × 18 × 9 cm. Sastoji se od procesora za zvuk i efekte, analogno-digitalnog i digitalno-analognog pretvarača i pojačavača za mikrofon, u kućištu sa elemetnima za upravljanje i prikazivanje i sa različitim analognim, optičkim i digitalnim ulazima i izlazima kao i FireWire portovima. Ima sledeća glavna tehnička svojstva: | – | hibridno FireWire/USB2 povezivanje (mogućnost da se poveže za mašinom za automatsku obradu podataka (AOP)), | – | uređaj za mešanje zvuka sa 28 ulaza i efektima digitalne obrade signala, | – | poseban softver za mešanje zvuka, | – | odvojene priključke za slušalice na prednjem panelu, svaki sa nezavisnim podešavanjem jačine zvuka, i| – | LED časovnik za prikazivanje stanja na prednjem panelu. Mašina je konstruisana da se koristi u digitalnoj muzičkoj produkciji u stidijima zvuka ili uživo na pozornici. Može da radi na dva načina, povezana sa AOP mašinom ili samostalno. Kada se mašina koristi povezana sa AOP mašinom, služi za pretvaranje i obradu audio signala koji stižu iz spoljašnjih audio izvora i za pretpojačavanje mikrofonskog signala. U samostalnom načinu rada, mašina može da se koristi kao uređaj za mešanje zvuka sa integrisanim efektima.	**8543 70 90**

The apparatus has the following sockets: | – | a Serial Digital Interface (SDI), | – | a High Definition Multimedia Interface (HDMI), | – | an RJ-45 interface, and | – | a power connector. | The apparatus is designed to convert video signals from SDI format to HDMI format. | The RJ-45 interface serves to connect the apparatus to the Ethernet only for the software updates and to get electric power needed for those updates (Power over Ethernet ('PoE')).	Električni aparat (tzv. „video konverter"), pravougaonog oblika, dimenzija približno 17 × 14 × 4 cm. Aparat ima sledeće utičnice: | – | serijski digitalni interfejs (SDI), | – | multimedijalni interfejs visoke definicije (HDMI), | – | RJ-45 interfejs, i | – | priključak za napajanje. Aparat je konstruisan da pretvara video signale SDI formata u HDMI format. RJ-45 interfejs služi da poveže aparat sa Eternetom samo za ažuriranje softvera i ostvarivanje napajanja neophodnog za ta ažuriranja (Power over Ethernet – („PoE")).	**8543 70 90**
32014R0457, 457/2014 of 29.4.2014, (OJ L 133, 6.5.2014, p. 35–38). http	78/2014, 25.7.2014. https://	A digital electronic apparatus with one High-Definition Multimedia Interface (HDMI) input and eight HDMI outputs (so-called 'active HDMI splitter') in a housing with dimensions of approximately 12 × 6 × 2 cm. It supports the High-bandwidth Digital Content Protection (HDCP) protocol and is supplied with 5 V DC. The apparatus is used for simultaneously split-ting, without loss of quality, one HDMI input signal into eight HDMI output signals with the same technical characteristics as the original input signal. It allows a HDMI signal originating from one source (for example, a set-top box) to be simul- taneously distributed to several apparatus (for example, television sets).	Digitalni elektronski aparat sa jednim HDMI ulazom (multimedijalni interfejs visoke rezolucije) i osam HDMI izlaza (takozvani "aktivni HDMI razdvajač") u kućištu dimenzija približno 12 x 6 x 2 cm. Podržava HDCP protokol (zaštita širokopojasnog digitalnog sadržaja) i napaja se jednosmernom strujom napona 5V. Aparat se upotrebljava za simultano razdvajanje, bez gubitka kvaliteta, jednog HDMI ulaznog signala u osam HDMI izlaznih signala sa istim tehničkim karakteristikama kao originalni ulazni signal. To omogućava da se HDMI signal koji potiče iz jednog izvora (na primer iz set-top boksa) istovremeno prenosi na nekoliko aparata (na primer, televizijske aparate).	**8543 70 90**

Celex No: Regulation No/Date: OJ L No/Date	"Sl. gl. RS" br./datum	Discription of goods	Opis robe	CN oznaka
32017R0635, 2017/635 of 30.3.2017, (OJ L 91, 5.4.2017, p. 1–3). http	67/2017, 7.7.2017. https://	An article in the form of an empty cylindrical cartridge made of clear plastic approximately 44 mm long and sealed with a removable plastic stopper at the lower end as a protective cap. The upper part of the cartridge is shaped like a mouthpiece and has a small hole through which vapour can be inhaled. | The user fills the empty cartridge with a special liquid called 'e-liquid' and the cartridge is then inserted into the e-cigarette. The same cartridge can be refilled and reused for smoking between 10 and 20 times before being disposed of as waste. | The mouthpiece plays the role of the filter on conventional tobacco cigarettes. When the cartridge is inserted in the e-cigarette, the user places the mouthpiece end in the mouth and inhales. This causes the atomiser in the e-cigarette to convert the liquid into a gentle stream of mist which is then released through the mouthpiece into the user's mouth. | See images (*1)	Proizvod u obliku prazne cilindrične patrone izrađen od providne plastike dužine približno 44 mm i sa donje strane zatvoren plastičnim zapušačem kao zaštitnim zaklopcem koji se može skidati. Gornji deo patrone je u obliku piska i ima mali otvor kroz koji se mogu udisati isparenja. | Korisnik puni praznu patronu specijalnom tečnošću tzv. "tečnost za elektronske cigarete", a potom se patrona umeće u elektronsku cigaretu. Jedna patrona se može puniti i ponovo koristiti za pušenje između 10 i 20 puta pre nego što se odbaci kao otpad. | Pisak ima ulogu filtera konvencionalne duvanske cigarete. Kada se patrona umetne u elektronsku cigaretu, korisnik deo sa piskom stavlja u usta i udiše. Ovo uzrokuje da atomizer u elektronskoj cigareti pretvara tečnost u lagani mlaz vodene pare koji se zatim ispušta kroz pisak u usta korisnika. | Videti slike (1*)	**8543 90 00**
32003R1386, 1386/2003 of 1.8.2003, (OJ L 196, 2.8.2003, p.19). http	73/2010, 12.10.2010. https://	Muscle-exercise kit, presented in a plastic carrying-case, consisting of a battery-operated electronic unit with cables, eight electrodes and two adjustable elasticated straps. The electrodes are held in place on the human body by the straps, and are connected by cables to the electronic unit. Electric impulses are transmitted through the electrodes, to stimulate repeated contraction of the muscles. The strength of the impulses can be increased or decreased	Komplet za vežbanje mišića, isporučen u plastičnoj futroli za nošenje, sastoji se od elektronske jedinice sa kablovima koja radi na baterije, osam elektroda i dve podesive elastične trake. Elektrode se postavljaju na telo čoveka putem traka, i povezuju se kablovima za eletronsku jedinicu. Elektronski impulsi prenose se preko elektroda, tako da pospešuju ponavljanje kontrakcija mišića. Jačina impulsa može se povećati ili smanjiti.	**8543 70 90**
31994R3272, 3272/94 of 27.12.1994, (OJ L 339, 29.12.1994, p.58). http	117/2012, 12.12.2012. https://	Junction-box, for use in cable-television systems, consisting of a metal box (approximately, 10 x 10 x 7 cm) fitted with inputs for cables and terminals. The box contains an electric circuit with a number of electric components (such as coils, transformers, resistors and capacitors) and connections. The junction-box's function is to reduce the signal-voltage fed through the cable to the television-receivers and, by means of a filter, to prevent the supply-voltage for the amplifiers from reaching the television-receivers	Razvodna kutija, koristi se za sistem kablovske televizije, sastoji se od metalne kutije (približno, 10 x 10 x 7 cm) u koju su ugrađeni ulazi za kablove i priključne ploče. Kutija sadrži električna kola sa brojnim električnim komponentama (kao što su namotaji, transformatori, otpornici i kondenzatori) i vezama. Razvodna kutija služi da smanji naponski signal kroz kabl do televizijskog prijemnika, pomoću filtera, i spreči da se mrežni napon pojača dok stigne do televizijskog prijemnika.	**8543 70 90**

The liquid crystal device consists of a liquid crystal layer sandwiched between two sheets of glass. The outer layer of the glass cells is coated with a thin metallic electrically conductive and resistive layer.The module is based on thin-film transistor (TFT) technology. It has overall dimensions of 34,5 (W) × 35,3 (H) × 16,5 (D) cm and a diagonal screen measurement of 38,1 cm (15 inches).The module does not incorporate any other electronic components (for example, a power supply, a video converter, a scaler, a tuner, etc.), or interfaces for connection to other apparatus.	Proizvod poznat kao "LCD modul (tipa ostljivog na dodir)", u vidu uređaja sa aktivnom matricom tečnih kristala, sa pozadinskim svetlom, inverterima i pločom sa štampanim kolima sa kontrolnom elektronikom samo za adresiranje piksela. Uređaj sa tečnim kristalima sastoji se od sloja tečnih kristala u sendviču između dva staklena lista. Spoljni sloj ćelija stakla prevučen je tankim elektro provodljivim i elektro otpornim slojem metala. Modul je baziran na tehnologiji tankoslojnih tranzistora (TFT). Dimenzije preko svega su 34,5 (Š) x (35,3) (V) x 16,5 (D) cm i dijagonalnom dimenzijom ekrana od 38,1 cm (15 inča). Modul ne sadrži ni jednu drugu elektronsku komponentu (na primer, napajanje, vido konverter, skaler, tjuner, itd.), ili interfejs za povezivanje na druge aparate.	**8548 90 90**

32017R1233, 2017/1233 of 3.7.2017, (OJ L 177, 8.7.2017, p. 26–28). http	87/2017, 27.9.2017. https://	A new, four-wheel drive multipurpose motor vehicle (of the van-type). The vehicle has a compression-ignition internal combustion piston engine of a cylinder capacity exceeding 1 500 cm3 but not exceeding 2 500 cm3. Its total gross weight is approximately 2 800 kg. | The vehicle has two rows of seats, the first row with two seats (a driver's seat and a 'bench seat' to be used by two passengers) and a second row with three seats. There are doors with a window on both sides of the first row of seats and, in respect of the second row of seats, a window on the left side and a sliding door with a window on the right side. | Behind the second row of seats there is a permanent barrier (partition grille) dividing the passenger area from an area for the transport of goods. There are neither safety belts nor fittings for their installation in the area for the transport of goods. There is a back door of a swing-out type but no windows in the area for the transport of goods. The vehicle has comfort features and interior finish and fittings which are associated with the passenger areas of vehicles. | The area for the transport of goods is of a length of approximately 1,9 m and of a load capacity of 4,4 m3.	Novo, višenamensko motorno vozilo na četiri točka (tip „VAN" („kombi")). Vozilo ima klipni motor sa unutrašnjim sagorevanjem na paljenje pomoću kompresije, zapremine cilindara preko 1500 cm3 ali ne preko 2500 cm3. Njegova ukupna bruto masa je približno 2800 kg. Vozilo ima dva reda sedišta, i to prvi red sa dva sedišta (sedište za vozača i „sedište klupu" koju koriste dva putnika) i drugi red sa tri sedišta. Na obe bočne strane prvog reda sedišta nalaze se vrata sa prozorom, a što se tiče drugog reda sedišta, na levoj bočnoj strani je prozor, a na desnoj bočnoj strani su klizna vrata sa prozorom. Iza drugog reda sedišta nalazi se stalna pregrada (pregradna rešetka) koja deli prostor za putnike od prostora za prevoz robe. Ne postoje niti sigurnosni pojasevi ni pribor za njihovu ugradnju u prostoru za prevoz robe. Zadnja vrata imaju dvokrilno otvaranje, ali ne postoje prozori u prostoru za prevoz robe. Vozilo ima odlike komfora i izradu unutrašnjeg prostora i pribor koji odlikuju putnički prostor vozila. Dužina prostora za prevoz robe je približno 1,9 m, a tovarna zapremina je 4,4 m3.	**8703 32 19**

Vozilo na tri točka, tzv. "Trike" sa klipnim motorom na paljenje pomoću svećice, zapremine cilindra 1584 cm3. Vozilo nema karoseriju i namenjeno je za prevoz dve osobe. Opremljeno je upravljačem i upravljačkim mehanizmom tipa za motocikle. Vozilo je takođe opremljeno sa menjačkom kutijom koja ima četiri brzine za kretanje napred, jednu za kretanje unazad i diferencijal.	**8703 23 19**
32015R0221, 2015/221 of 10.2.2015, (OJ L 37, 13.2.2015, p. 1–3). http	31/2015, 1.4.2015. https://	A new, four-wheel drive utility vehicle with a compression-ignition internal combustion piston engine (diesel) of a cylinder capacity of 720 cm3, with a net weight (including fluids) of approximately 630 kg, an unbraked towing capacity of 750 kg and with dimensions of approximately 300 × 160 cm. The vehicle has an open cabin with two seats (including the driver) fitted with a full roll-over protection frame, a cargo bed constructed of a strong steel frame with a sturdy flat-bed tipping body, with a manual tipper and of a capacity of 0,4 m3 or, approximately, 400 kg. It has a high ground clearance (27 cm) and a wheel base of 198 cm. It is equipped with off-road earth moving tyres, wet-type disc brakes, a coupling device and a front hitch. The vehicle has a limited speed of 25 km/h, and a high brake capacity. The vehicle is designed for off-road use, particularly in very rough terrain. The vehicle is presented to be used for a range of functions, for example, pushing, hauling trailers, moving animals, transporting plants, boxes, water and equipment, carrying munitions and transporting feed for animals. (*) See image.	Novo, vozilo sa pogonom na sva četiri točka, sa klipnim motorom sa unutrašnjim sagorevanjem i paljenjem pomoću kompresije (dizel), zapremine cilindara 720 cm3, približne neto mase (uključujući tečnosti) 630 kg, vučnog kapaciteta bez kočnica od 750 kg i dimenzija približno 300 x 160 cm. Vozilo ima otvorenu kabinu sa dva sedišta (uključujući vozača), opremljenu punim zaštitnim ramom za slučaj prevrtanja, tovarni prostor koji je konstruisan od jakog čeličnog okvira sa čvrstim ravnim nakretnim sandukom, sa ručnim nakretanjem i kapacitetom od 0,4 m3 ili približno 400 kg. Ima veliki klirens (27 cm) i međuosovinsko rastojanje 198 cm. Opremljeno je gumama za kretanje po zemljanom terenu van puteva, mokrim disk kočnicama, priključnom spojnicom i prednjom kukom. Vozilo ima ograničenu brzinu od 25 km/h i veliki kapacitet kočenja. Vozilo je konstruisano za vožnju van puteva, naročito za veoma neravan teren. Vozilo se isporučuje za korišćenje za različite funkcije, na primer, guranje, vuča prikolica, prevoz životinja, prevoz bilja, kutija, vode i opreme, prevoz municije i transport hrane za životinje. 32014R1038, 1038/2014 of 25.9.2014, (OJ L 287, 1.10.2014, p. 14–19). http	137/2014, 16.12.2014. https://	with an inner diameter ranging from 1,47 mm to 2,29 mm and a length of 100 cm with a radiopaque marker and an atraumatic (flexible) tip. The article comprises a double interlock knit flat section of stainless steel, encapsulated in plastic material (PEBA, polyphthalamide (PPA), Nylon) and it has a lubricant coating applied to the silicon inner surface of the guide catheter. The guide catheter enables access to the coronary artery through a vein. Other appliances can be directed by this guide catheter to the artery. The radiopaque marker makes it possible to locate the exact position of the atraumatic tip in the body. The guide catheter is removed from the body and discarded after treatment. The article is presented in packaging and is sterilised. (*) See image 2	Plastična, zakrivljena cev (tzv. "uvodni kateter"), unutrašnjeg prečnika u opsegu od 1,47 mm do 2,29 mm i dužine 100 cm, sa radionepropusnim markerom i atraumatskim (fleksibilni) vrhom. Proizvod se sastoji od ravnog dela sa duplim prepletajem od nerđajućeg čelika koji je inkapsuliran u plastični materijal (PEBA, poliftalamid (PPA), najlon), a unutrašnja silikonska površina uvodnog katetera prevučena je lubrikantom. Uvodni kateter, kroz venu omogućava ulaz u koronarnu arteriju. Ovim uvodnim kateterom drugi uređaji se mogu usmeriti do arterije. Radionepropusni marker omogućava da se locira tačna pozicije atraumatskog vrha u telu. Uvodni kateter se uklanja iz tela i odbacuje nakon tretmana. Proizvod se isporučuje u pakovanju i sterilan je. (*) Videti sliku 2	**9018 39 00**
32014R1038, 1038/2014 of 25.9.2014, (OJ L 287, 1.10.2014, p. 14–19). http	137/2014, 16.12.2014. https://	A plastic tube with a length of 142 cm with a plastic balloon at one end (so-called ‘balloon catheter’). The proximal segment of the catheter has a diameter of 0,63 mm and is made of hypotube material and coated with polytetrafluorethylene (PTFE). The distal segment of the catheter has a diameter in a range from 0,79 to 1,02 mm and is made of polyether bloc amide (PEBA) material and coated with hydrophilic material. The balloon has a length of 6 to 27 mm and a diameter of 2 to 5 mm. The tube has a Luer connection, an atraumatic (flexible) tip and 2 golden marker bands. The Luer connection makes it possible to connect the tube to an inflating device which is used to inflate the balloon. The atraumatic tip is used to move the catheter via a vein up through the body into the coronary artery. When the catheter is on the right place in the coronary artery, the balloon is inflated so that the fatty deposits (atherosclerotic plaque) are pressed against the wall of the vein. By compressing the plaque, the inside diameter of the vein increases. The marker bands make it possible to locate the exact position of the atraumatic tip in the body. The balloon catheter is removed from the body and discarded after treatment. The article is presented in packaging and is sterilised. (*) See image 1	Plastična cev dužine 142 cm sa plastičnim balonom na jednom kraju (tzv. "balon kateter"). Proksimalni segment katetera je prečnika 0,63 mm i izrađen je od materijala za hipocevi i prevučen politetrafluoretilenom (PTFE). Distalni segment katetera je prečnika u opsegu od 0,79 do 1,02 mm i izrađen je od polieter blok amida (PEBA) i prevučen hidrofilnim materijalom. Balon je dužine od 6 do 27 mm i prečnika od 2 do 5 mm. Cev ima Luer priključak, atraumatski (fleksibilni) vrh i 2 zlatne marker trake. Luer priključak omogućava povezivanje cevi za uređaj za naduvavanje koji se koristi za naduvavanje balona. Atraumatski vrh se koristi za kretanje katetera putem vene, kroz telo, do koronarne arterije. Kada je kateter na pravom mestu u koronarnoj arteriji, balon se naduvava tako da masne naslage (arterosklerotični plak) pritiskaju zid vene. Sabijanjem plaka, povećava se prečnik vene. Marker trake omogućavaju lociranje tačnog položaja atraumatskog vrha u telu. Balonski kateter se uklanja iz tela i odbacuje nakon tretmana. Proizvod se isporučuje u pakovanju i sterilan je. 32010R0310, 310/2010 of 9.4.2010, (OJ L 94, 14.4.2010, p.27). http	28/2010, 30.4.2010. https://	An apparatus having the appearance of a walk-through portal used at airport security points (so-called "mass spectrometer"). It is designed for the detection of illicit substances, such as explosives and narcotics, by using Ion Trap Mobility Spectrometer (ITMS) technology. The analysis is based on samples of air which pass through a semi-permeable membrane and enter an ionisation chamber where an ionisation source emits beta particles resulting in ion formation in the gaseous phase. The ionisation is then pulsed into a drift tube where an electric field accelerates the ions to a collector electrode. The sample is then analysed based on the time taken by the ions to reach the collector. Consequently, the apparatus separates ionised vapours and then measures the mobility of the ions in an electric field. The apparatus does not use optical radiation.	Uređaj u vidu prolaznog portala koji se koristi na aerodromskim sigurnosnim mestima (tzv. „maseni spektrometar“). Projektovan je za detekciju opasnih materija, kao što su eksploziv i narkotici, korišćenjem tehnologije pokretne spektrometrije sa jonskom zamkom (Ion Trap Mobility Spectrometer - ITMS). Analize su zasnovane na uzorcima vazduha koji prolazi kroz polupropustljivu membranu i ulazi u jonizacionu komoru gde jonizujući izvor emituje beta čestice obrazujući jona u gasnoj fazi. Jonizacija se potom pulsno usmerava kroz cev u kojoj električno polje ubrzava jone do kolektorske elektrode. Uzorci se potom analiziraju na osnovu vremena koje je potrebno jonima da stignu do kolektora. Prema tome, uređaj odvaja jonizovane gasove a potom meri pokretljivost jona u električnom polju. Uređaj ne koristi optičke zrake.	**9027 80 17**
32013R1212, 1212/2013 of 26.11.2013, (OJ L 317, 28.11.2013, p. 30–32). http	5/2014, 22.1.2014. https://	Heartbeat measuring equipment consisting of: | – | a heartbeat sensor and a wireless transmitter, incorporated in a chest strap, | – | a heart rhythm monitoring device incorporating a wireless receiver and a watch, with control buttons and an opto-electronic display, which can be worn on the wrist, | – | a bracket for fixing the heart rhythm monitoring device to the handle bars of a bicycle. The heartbeats are captured by the sensor and the corresponding data is transmitted wirelessly to the monitoring device which calculates the heart rhythm (actual, maximum or average) and displays the result. The equipment also works as a watch and a stopwatch. (*) See image 1	Oprema za merenje otkucaja srca sastoji se od: senzora za otkucaje srca i bežičnog predajnika koji su ugrađeni u traku na grudima, uređaja za praćenje (monitoring) srčanog ritma koji u kojem se nalaze bežični prijemnik i ručni časovnik, sa upravljačkim tasterima i optoelektronskim ekranom, koji se može nositi na ručnom zglobu, držača za pričvršćivanje uređaja za praćenje srčanog ritma na ručke bicikla. Senzor registruje otkucaje srca i bežičnim putem prenosi odgovarajući podatak do uređaja za praćenje, koji proračunava srčani ritam (trenutni, maksimalni ili prosečni) i prikazuje rezultat. Oprema takođe funkcioniše kao ručni časovnik i štoperica. (*) Videti sliku 1.	**9031 80 38**

32015R0805, 2015/805 of 19.5.2015, (OJ L 128, 23.5.2015, p. 10–12). http	53/2015, 19.6.2015. https://	An electronic instrument (so-called 'rate gyro') with a weight of 35 g, comprising up to three angular velocity sensors, in a housing with dimensions of 24 × 24 × 28 mm. The housing also contains a temperature sensor and various electronics and is equipped with a cable. The instrument senses angular velocity in a range of approximately 50-1 200 °/s (degrees per second) and produces, by means of its electronic components, an electrical output signal proportional to the detected values. The signal is not displayed on the instrument, but transmitted to other apparatus connected via the cable. The temperature sensor provides information for compensating eventual variations in the output signal due to temperature change. The instrument is presented to be used for giving various apparatus, such as wind turbines, engines or industrial machines, instructions on the appropriate position to operate.	Elektronski instrument (tzv. "brzinski žiroskop") mase 35 g, koji sadrži do tri senzora ugaone brzine, u kućištu dimenzija 24 x 24 x 28 mm. Kućište takođe sadrži senzor temperature i različitu elektroniku i opremljen je kablom. Instrument je osetljiv na ugaonu brzinu u opsegu približno 50-1200°/s (stepeni po sekundi) i pomoću elektronskih komponenti proizvodi izlazni električni signal srazmeran detektovanim vrednostima. Signal se ne prikazuje na instrumentu, već se prenosi na druge aparate koji su povezani kablom. Senzor temperature obezbeđuje informacije za kompenzovanje slučajnih promena u izlaznom signalu nastalih promenom temperature. Instrument se isporučuje da se koristi kako bi različitim aparatima, kao što su vetro turbine, motori ili industrijske mašine, davao instrukcije o odgovarajućem položaju za rad.	**9031 80 38**
32012R1124, 1124/2012 of 26.11.2012, (OJ L 331, 1.12.2012, p. 7-8). http	9/2013, 29.1.2013. https://	A hermetically sealed weighing sensor (so-called "load cell") incorporating a strain gauge in the form of a bridge circuit with dimensions of approximately 13 × 3 × 3 cm. The load cell operates at the deflection of the strain gauge filament when it is subjected to a physical force. The physical force creates a change in resistance of the filament, thereby unbalancing the bridge circuit which in turn changes the voltage of the current passing through. The load cell converts the physical force acting on it into an electrical signal proportional to that force. The signal is read out, processed and shown by a device not included upon presentation. The load cell is designed to be used, for example, in floor scales, blenders, hoppers and tank scales.	Hermetički zaptiven senzor težine (takozvana „merna ćelija“) ima ugrađen merač naprezanja u obliku mostnog kola, dimenzija približno13 x 3 x 3 cm. Merna ćelija (load cell) radi pri ugibanju filamenta merača naprezanja kada na njega deluje fizička sila. Fizička sila stvara promenu otpora filamenta i na taj način narušava ravnotežu mostnog kola koje kao odgovor menja napon struje koja prolazi kroz njega. Merna ćelija pretvara fizičku silu koja na nju deluje, u električni signal proporcionalan toj sili. Signal se očitava, obrađuje i prikazuje na uređaju koji nije uključen u isporuku. Merna ćelija je konstruisana da se koristi, na primer, u podnim vagama, vagama u mešalicama, spremištima i cisternama.	**9031 80 98**

32015R0386, 2015/386 of 5.3.2015, (OJ L 65, 10.3.2015, p. 5–6). http	39/2015, 4.5.2015. https://	A four-wheeled skateboard with dimensions of approximately 80 × 27 × 17 cm, a weight of 10 kg and a maximum load capacity of 65 kg. The article is equipped with an electric motor powered by two rechargeable 24 V batteries. The article has the following characteristics: | – | the wheels are made of polyurethane and have a diameter of 85 mm, | – | only the two rear wheels are driven by a belt, | – | the surface of the article is covered with an anti-slip layer, | – | the electric motor is mounted under the article, | – | it has a speed range of 10-32 km/h, no brakes and no steering system. The skateboard is presented with a handheld remote control. The skateboard is powered by an electric motor, which is operated by the person riding the board by means of the remote control. While riding the skateboard, its speed can be regulated by pulling a trigger on the remote control.	Skejtbord na četiri točka dimenzija približno 80 h 27 h 17 cm, mase 10 kg i maksimalne nosivosti 65 kg. Proizvod je opremljen sa električnim motorom, koji radi na dve baterije od 24 V, koje se mogu puniti. Proizvod ima sledeće karakteristike: - točkove izrađene od poliuretana prečnika 85 mm, - samo se zadnja dva točka pogone preko kaiša, - površina proizvoda je prekrivena je slojem protiv klizanja, - električni motor je montiran ispod proizvoda, - ima opseg brzine 10 –32 km/h, bez kočionog i upravljačkog sistema. Skejtbord se isporučuje sa ručnim daljinskim upravljačem. Skejtbord se pokreće pomoću električnog motora, kojim preko daljinskog upravljača upravlja osoba, koja vozi skejtbord. U toku vožnje skejtborda, njegova brzina se može regulisati povlačenjem potezača na daljinskom upravljaču.	**9506 99 90**

Par nepotopivih plastičnih kolutova, svaki sa po dve vazdušne komore. Dizajnirani su da ih nose deca oko ruku da bi se održavala plutajući u plitkoj vodi. NJihova konstrukcija ne obezbeđuje nivo sigurnosti za spasavanje ili zaštitu.	**9506 29 00**
32012R0399, 399/2012 of 7.5.2012, (OJ L 124, 11.5.2012, p. 11-12). http	57/2012, 8.6.2012. https://	An unassembled article, (so-called "safety net for trampoline") comprising: a net with 6 snap closures,6 upper metal bars with cellular plastic covering,6 lower metal bars with cellular plastic covering and welded mounting brackets,12 rubber bands with hooks,12 screws with locking nuts.Each upper bar is to be fitted to the lower bar which is then fastened to the legs of the trampoline using the screws and locking nuts. The net is sewn into the shape of a cylinder and it comes in a size to fit a specific trampoline. The net has an entrance opening that can be closed by a zipper. The snap closures on the upper part of the net are to be fastened to the top end of the metal bars. The rubber bands with hooks are used to fasten the bottom of the net to the frame of the trampoline.	Nesastavljen proizvod, (takozvana „ sigurnosna mreža za trambolinu“) sastoji se od: mreže sa 6 driker zatvarača, 6 gornjih metalnih šipki sa oblogom od plastične mase ćelijaste strukture, 6 donjih metalnih šipki sa oblogom od plastične mase ćelijaste strukture i zavarenim elementima za montažu , 12 gumenih traka sa kukama, 12 vijaka sa osiguravajućim navrtkama. Svaka gornja šipka se montira na donju koja se potom pričvršćuje na nogare tramboline korišćenjem vijaka i osiguravajućih navrtki. Mreža je zašivena u oblik cilindra i isporučuje se u veličinama koje odgovaraju određenoj trambolini. Mreža ima bočni ulaz koji se može zatvarati patent zatvaračem. Driker zatvarači na gornjem delu mreže pričvršćuju se za vrh metalnih šipki. Gumene trake sa kukama se upotrebljavaju da pričvrste dno mreže za konstrukciju tramboline.	**9506 91 90**
32004R0384, 384/2004 of 1.3.2004, (OJ L 64, 2.3.2004, p.21). http	38/2010, 4.6.2010. https://	Article (snowshoe), 65 cm in length and 23 cm at its widest, consisting of an aluminium frame with a plastic covering, tapered at one end and rounded at the other. The frame has an 1-mm-thick plastic attachment serrated on the underside for metal blades, to ensure better footing in snow. A rigid metal plate is secured to the upper side of the frame by a plastic strap. There are rubber pads on the plate, to fit around a shoe, with rubber/fabric straps for attachment to the shoe. The article is an aid to walking on snow	Proizvod (cipele za sneg), dimenzija 65 cm po dužini, i 23 cm na najširem delu, sastoji se od aluminijumskog okvira sa pokrivnim slojem od plastike, i koji je na jednom kraju zašiljen a na drugom zaobljen. Okvir ima dodatak od plastike, debljine 1 mm, koji ima useke za metalne oštrice sa donje strane da bi se osigurala bolja potpora za stopalo na snegu. Čvrsta metalna ploča je pričvršćena za okvir, sa gornje strane, plastičnom trakom. Komadi od gume su pričvršćeni za ploču i idu preko obuće kada se nose, a oni opet, imaju trake od gume/tekstila da pričvrste proizvod za obuću. Proizvod se upotrebljava za hodanje po snegu.
